Get your children learning with this amazing Earth book, which is packed with fantastic facts for curious minds.

The Moon Macmillan Education AU

Look up into the sky on any cloudless night, and chances are you'll see the Moon. Our glowing neighbor in space is as familiar to us as the Sun and the stars. You may even have imagined walking on its surface. But how much do you really know about the Moon? You may already know that the Moon is our planet's only natural satellite, that it circles the Earth, and that we can watch it go through phases from round and full to thin like a sickle. But do you know how high you could jump on the Moon? Or what the Moon's seas are made of? Or what would happen if we didn't have the Moon? (Hint: Our days would be a lot shorter.) Or how about whether people will ever visit the Moon again? Read on to find the answers to these fascinating questions and much more!

The Earth-moon System Exploring Our Solar System

"This, the second book of the trilogy, will stretch the limits of space, time and religion, as we know them. It is an epic journey by this dauntless crew to collect the third, powerful, crystal core before a madman and his followers can get their hands on it. This sequel takes the reader to our Moon, Mars and the Stars in an effort to find the answers we have sought since the beginning of intelligent thought."

Report to the Congress of the United States: Public hearings. (pt.1-4) Great Explorations

The Inter Ocean Curiosity Shop ... DIANE Publishing

Describes the surface and movement of the moon, eclipses, the moon's effect on tides, and the possible origin and formation of the moon.

Manufactured Milk Products Journal Carson-Dellosa Publishing Since Luna and Lunar Orbiter photographed the far side of the Moon, the mysterious dichotomy between the face of the Moon as we see it from Earth and the side of the Moon that is hidden has puzzled lunar scientists. As we learned more from the Apollo sample return missions and later robotic satellites, the puzzle literally deepened, showing asymmetry of the crust and mantle, all the way to the core of the Moon. This book summarizes the author's successful search for an ancient impact feature, the Near Side Megabasin of the Moon and the extensions to impact theory needed to find it. The implications of this ancient event are developed to answer many of the questions about the history of the Moon.

Sanitary and Heating Age

"Our moon is magnificent. Sometimes, it appears in the night sky as a massive glowing disk. Other nights, it can't be seen at all. Without the moon, our world would be a different place"--
