WRITING ON THE WALL CarTech Inc

This book is dedicated to Aristid Lindenmayer on the
occasion of his 60th birthday on November 17, 1985.
Contributions range from mathematics and theoretical
computer science to biology. Aristid Lindenmayer
introduced language-theoretic models for developmental
biology in 1968. Since then the models have been cus-
tomarily referred to as L systems. Lindenmayer's
invention turned out to be one of the most beautiful
examples of interdisciplinary science: work in one area
(developmental biology) induces most fruitful ideas in
other areas (theory of formal languages and automata, and
formal power series). As evident from the articles and
references in this book, the in terest in L systems is
continuously growing. For newcomers the first contact
with L systems usually happens via the most basic class
of L systems, namely, DOL systems. Here "0" stands for
zero context between developing cells. It has been a
major typographical problem that printers are unable to
distinguish between 0 (zero) and 0 (oh). Thus, DOL was
almost always printed with "oh" rather than "zero", and
also pronounced that way. However, this
misunderstanding turned out to be very fortunate. The
wrong spelling "DOL" of "DOL" could be read in the
suggestive way: DO L Indeed, hundreds of researchers
have followed this suggestion. Some of them appear as
contributors to this book. Of the many who could not
contribute, we in particular regret the absence of A.
Ehrenfeucht, G. Herman and H.A. Maurer whose influence
in the theory of L systems has been most significant.

Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.
