This book presents operational and practical issues of automotive mechatronics with special emphasis on the heterogeneous automotive vehicle systems approach, and is intended as a graduate text as well as a reference for scientists and engineers involved in the design of automotive mechatronic control systems. As the complexity of automotive vehicles increases, so does the dearth of high competence, multi-disciplined automotive scientists and engineers. This book provides a discussion into the type of mechatronic control systems found in modern vehicles and the skills required by automotive scientists and engineers working in this environment. Divided into two volumes and five parts, Automotive Mechatronics aims at improving automotive mechatronics education and emphasises the training of students' experimental hands-on abilities, stimulating and promoting experience among high education institutes and produce more automotive mechatronics and automation engineers. The main subject that are treated are: VOLUME I: RBW or XBW unibody

or chassis-motion mechatronic control hypersystems; DBW AWD propulsion mechatronic control systems; BBW AWB dispulsion mechatronic control systems; VOLUME II: SBW AWS diversion mechatronic control systems; ABW AWA suspension mechatronic control systems. This volume was developed for undergraduate and postgraduate students as well as for professionals involved in all disciplines related to the design or research and development of automotive vehicle dynamics, powertrains, brakes, steering, and shock absorbers (dampers). Crawford's New Product Management 12e provides the management approach to teaching new products, with the perspective of marketing. Adopters of previous editions will notice that the format is slimmed down to 18 chapters. This streamlined presentation focuses on the topics that will be of most importance and interest to new product managers. Significant updates can be found throughout, and great pains have been taken to present the "best practices" of industry and relevancy to readers. Past adopters of New Products Management will notice major changes in this edition. While there are some changes in virtually every chapter, some of the most substantial changes are as follows: 1. We have made major additions and updates to the cases to provide more plentiful and more current examples. We retired several cases from the previous edition, wrote many new cases, and thoroughly updated many others. New cases for this edition include: Oculus Rift, Adidas Parley sustainable running shoes, Google Glass, Indiegogo, Tesla, Chipotle,

Chick-fil-A, Corporate Social Responsibility at Starbucks, and many others. As always, we aim to offer a mix of high tech products and consumer products and services in the set of cases. 2. In addition, we have substantially updated examples throughout the text wherever possible. We try to make use of illustrative examples that will resonate with today's students wherever possible. Of course, we welcome the reader's comments and suggestions for improvement. 3. There continues to be much new research in new products, and we have tried to stay current on all of these topics. Readers will notice new or expanded coverage of portfolio management, value curve creation, the TRIZ method, crowd-sourcing, crowdfunding, observational research, open innovation, organizational structure, 3D modeling, beta testing, sustainable product development, and frugal innovation, among other topics. 4. We continue the practice of referencing Web sites of interest throughout the text, and we have added the web addresses for several useful YouTube videos and other resources.
