Skala is slipping inexorably west from the divide into the harsh desert of Hellinar and to its death. Over 1000km east, another city is on the verge of its birth, created with the aid of two ancient artificial intelligence cores. When one of the cores goes missing, a series of revealing events triggers, hinting at something rotten, and deeply linked to the founding of the new city. The loss of the core can't be kept under wraps forever – soon a plan is put into place – forcing the rapid completion of an advanced exploratory vehicle that may be the only hope of a recovery. Trinity is a story of family, forgotten history, advancing technology and a twisting series of events. Follow a collection of rich characters on interconnecting paths to re-discover the truth about their small, isolationist civilisation – and something far bigger than any of them could have imagined...

For those times when hard work and persistence just aren't enough, Terri Sjodin offers an inspiring guide to getting scrappy and beating the odds. Terri Sjodin loves scrappy people -- those who beat the odds with a blend of cleverness and fighting spirit. People who see big problems and come up with big solutions. People like the clever Girl Scout who sold 117 boxes of cookies in two hours outside a medical marijuana dispensary, or the entrepreneur who turned his home into an indoor jungle to sell investors on the Rainforest Cafe Restaurant chain. It can seem like these successes are just one-off acts of ingenuity or isolated flashes of brilliance. But today it takes more than just creativity, more than just persistence, more than just a dream to reach big goals -- it takes a mindset and a strategy. Sjodin explains the common elements behind every successful scrappy effort.

Popular Science
The companion book to an upcoming museum exhibition of the same name, Places of Invention seeks to answer timely questions about the nature of invention and innovation: What is it about some places that sparks invention and innovation? Is it simply being at the right place at the right time, or is it more than that? How does "place"—whether physical, social, or cultural—support, constrain, and shape innovation? Why does invention flourish in one spot but struggle in another, even very similar location? In short: Why there? Why then? Places of Invention frames current and historic conversation on the relationship between place and creativity, citing extensive scholarship in the area and two decades of investigation and study from the National Museum of American History's Lemelson Center for the Study of Invention and Innovation. The book is built around six place case studies: Hartford, CT, late 1800s; Hollywood, CA, 1930s; Medical Alley, MN, 1950s; Bronx, NY, 1970s; Silicon Valley, CA, 1970s– 1980s; and Fort Collins, CO, 2010s. Interspersed with these case studies are dispatches from three "learning labs" detailing Smithsonian Affiliate museums' work

using Places of Invention as a model for documenting local invention and innovation. Written by exhibition curators, each part of the book focuses on the central thesis that invention is everywhere and fueled by unique combinations of creative people, ready resources, and inspiring surroundings. Like the locations it explores, Places of Invention shows how the history of invention can be a transformative lens for understanding local history and cultivating creativity on scales of place ranging from the personal to the national and beyond.
