In October 1993, Robert Latimer, a Saskatchewan farmer, decided to end the life of his chronically ill daughter rather than subject her to another painful surgery. Tracy, who had the mental capacity of a five-month-old infant, was twelve at the time of her death. She had already endured multiple operations to correct conditions

caused by her severe cerebral palsy. Tracy's death and the charge of murder laid against Robert Latimer set in motion Canada's most famous and controversial case of "mercy killing." The case sparked a national debate about euthanasia and the rights of the severely disabled that continues today. Author Gary Bauslaugh takes us back to the beginning of this case, describes its explosion on the national scene during two highly publicized trials, and looks at later conflicts surrounding Latimer's parole hearing. In clear, insightful prose, Bauslaugh discusses the conflicting views of Latimer's sympathizers and detractors in chapters that explore the ethical dilemmas as well as the

legal issues that this case has raised. As a reporter who has followed the case from its beginnings and interviewed Latimer multiple times during his imprisonment and subsequent parole, Bauslaugh's intimate knowledge of the personalities and facts of this difficult case allow him to write a revealing and informed book.

Soy and its coproducts are rapidly emerging as one of the most prominent sustainable plastics of the 21st century. The relative abundance of soy and its functional and thermoplastic properties, low cost, and biodegradable characteristics have made it a material of great interest for widespread use in the plastics industry. As most of the functional properties of the final products are directly related to the physico-chemical properties of the raw material, a detailed knowledge of the inherent characteristics of soy-based materials is essential for understanding and manipulating their

properties for better end-user applications. This book summarises in a most comprehensive manner the recent technical research accomplishments in the area of soy-based bioplastics. The prime aim and focus of this book is to present recent advances in the processing and applications of soy-based biopolymers as potential bioplastics. It reflects recent theoretical advances and experimental results, and opens new avenues for researchers as well as readers working in the field of plastics and sustainable materials. The different topics covered in this book include: structural analysis of soy-based materials; soy/biopolymer blends; films, fibres, foams, and composites; and different advanced applications. In addition, several critical issues and suggestions for future work are comprehensively discussed in the hope that the book will provide a deep insight into the state of the art of soy-based bioplastics. The book is unique, with contributions from leading experts in the bioplastics research area, and is a useful reference for scientists, academics, research scholars, and technologists.

Permanent Obscurity is a youthful bohemian satire, a story of alienated nonconformists, a Thelma & Louise story. This pulp epic could be labeled a black comedy. It could be labeled anticonsumer and subversive. Welcome to the psychosexual world of Permanent Obscurity. Inspired by the underground sexploitation films of the 1960s, this bold updating of the roughies subgenre largely takes place in New York City's East Village (ca. 2006), and it chronicles the rise and fall of a unique and intense friendship. Dolores and Serena, two chemically dependent, down-and-out artists set out to take control of their lives by making a fetish-noir/femdom movie. Of course, things don't exactly turn out as planned.
