this version features a new
Dummies cover and design, the
content is the same as the prior

reorganized and updated Forty-
eight percent of U.S. households
perform at least some automobile
maintenance on their own, with
women now accounting for one
third of this \$34 billion
automotive do-it-yourself market.
For new or would-be do-it-
yourself mechanics, this
illustrated how-to guide has long
been a must and now it's even
better. A complete reorganization
now puts relevant repair and
maintenance information directly
after each automotive system
overview, making it much easier
to find hands-on fix-it
instructions. Author Deanna Sclar
has updated systems and repair
information throughout,
eliminating discussions of
carburetors and adding coverage
of hybrid and alternative fuel
vehicles. She's also revised
schedules for tune-ups and oil
changes, included driving tips
that can save on maintenance and
repair costs, and added new

advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

Tech Manual for Erjavec's Automotive Technology: A Systems Approach Haynes Manuals N. America, Incorporated

An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting

books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to

rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.
