Among members of the outlaw motorcycle clubs, Caesar Campbell is a legend. Former sergeant-at-arms and chief enforcer for the Comancheros, Caesar became the founding member and sergeant-at-arms of the Australian chapter of the Bandidos. He epitomised bikie culture - unbeatable in a fight, brutal in the extreme, fearing no one and nothing, and loyal until death. This is Caesar's story, from his recruitment into the Comancheros, to the savage split within the club that led to the foundation of the Bandidos and the bloody massacre at Milperra that resulted from it. This was the massacre that saw the death of two of Caesar's brothers, and resulted in four bullet wounds and a lengthy jail term for him. Never before has someone so respected in the bikie gangs opened a window on to their world. The fact that Caesar has been able to do so is a testament to his ruthlessness, his fearlessness and his reputation in the bikie community. Enforcer is a unique and captivating true crime story that will shock you with its raw violence, its brutality and its insights into an outlaw world.

This book has proved its worth over the years as a text for courses in Production Management at the Faculty of Automotive Engineering in Turin, Italy, but deserves a wider audience as it presents a compendium of basics on Industrial Management, since it covers all major topics required. It treats all subjects from product development and "make or buy" -decision strategies to the manufacturing systems setting and management through analysis of the main resources needed in production and finally exploring the supply chain management and the procurement techniques. The very last chapter recapitulates the previous ones by analysing key management indicators to pursue the value creation that is the real purpose of every industrial enterprise. As an appendix, a specific chapter is dedicated to the basics of production management where all main relevant definitions, techniques and criteria are treated, including some numerical examples, in order to provide an adequate foundation for understanding the other chapters. This book will be of use not only to Automotive Engineering students but a wide range of readers who wish to gain insight in the world of automotive engineering and the automotive industry in general.

Automobile Book 1997 Haynes Publishing UK

Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption-the amount of fuel consumed in a given driving distance-because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
