This book covers all technical details of the vehicle electrification process, with focus on power electronics. The book illustrates this evolutionary process with numerous series-production examples for either of body or chassis systems, from old milestones to futuristic luxury vehicles. Electrification of ancillaries and electric propulsion eventually meet into an all-electric vehicle and both processes rely heavily on power electronics. Power

electronics deals with electronic processing of electrical energy. This makes it a support technology for the automotive industry. Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of economy measures how far a engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the

full combination of improved technologies in medium and oxygen sensors, electric cooling with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumptionthe amount of fuel consumed in a given driving distancebecause energy savings are directly related to the amount of fuel used. In contrast, fuel vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases

and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
