Cadillac Eldorado and Seville Service Information Detroit Iron Cadillac has had a long history in the automotive marketplace as General Motors ' luxury car division. During the 1980s, Cadillac's management wanted to reestablish the brand as a leader in sophistication, innovation, refinement and prestige. Engineers conceived a new dual-overhead cam, four-valve-per-cylinder V-8 engine—the Northstar. This power plant was the heart of Cadillac ' s Northstar System, which included a greatly improved suspension and braking system. The division redesigned its entire line to incorporate these new technologies for the 1990s and beyond. The Northstar was the last engine designed and built by Cadillac before the 2005 establishment of GM Powertrain, which took over engine design for all GM divisions. This history of the Northstar V-8 and the cars it powered covers the first generation front-wheel drive Northstar, the second generation rear-wheel drive model, and the supercharged version, along with racing history and the most collectible Northstar-powered Cadillacs.

Escalade Detroit Iron

"In 1948 while the rest of the industry geared up to selling their warmed over pre World War II models, Cadillac introduced an all new design with styling cues taken from a World War II fighter plane, the P-38. The plane's twin tail booms inspired the rear fender tail fins. An ERA was born. Tail fins

would dominate the US auto industry for the next two decades. Welcome to the 1950's and 1960's. Tail-fins, lots of chrome and bright colors. The big American cars we all love."--Back cover.
