What begins as a routine assignment -- infiltrate a public building and retrieve monitoring equipment set up by APO -- goes horribly wrong. With the mission suddenly compromised, the true question becomes, Who's monitoring whom and why? Resourceful Sydney manages to complete the objective, but a split-second miscalculation during her escape endangers a civilian caught in the cross-fire. When haunting details of the victim emerge and the lead suspect is murdered, Sydney's carefully compartmentalized life threatens to unravel. Has she always made the right choices, knowing the inherent danger posed to those around her? Vaughn and Jack are understandably concerned. For a field agent, even the tiniest loss of focus can prove deadly....

The complexity of living organisms surpasses our unaided abilities of analysis. Hence, computational and mathematical methods are necessary for increasing our understanding of biological systems. At the same time, there has been a phenomenal recent progress allowing the application of novel formal methods to new domains. This progress has spurred a conspicuous optimism in computational biology. This optimism, in turn, has promoted a rapid increase in collaboration between specialists of biology with specialists of computer science. Through sheer complexity, however, many important biological problems are at present intractable, and it is not clear whether we will ever be able to solve such problems. We are in the process of learning what kind of model and what kind of analysis and synthesis techniques to use for a particular problem. Some existing formalisms have been readily used in biological problems, others have been adapted to biological needs, and still others have been especially developed for biological systems. This Research Topic has examples of cases (1) employing existing methods, (2) adapting methods to biology, and (3) developing new methods. We can also see discrete and Boolean models, and the use of both simulators and model checkers. Synthesis is exemplified by manual and by machine-learning methods. We hope that the articles collected in this Research Topic will stimulate new research.
