For the Radio Student and Practical Operator
Haynes Manuals N. America, Incorporated
What begins as a routine assignment --
infiltrate a public building and retrieve
monitoring equipment set up by APO -- goes
horribly wrong. With the mission suddenly
compromised, the true question becomes,
Who's monitoring whom and why?
Resourceful Sydney manages to complete the
objective, but a split-second miscalculation
during her escape endangers a civilian caught
in the cross-fire. When haunting details of the
victim emerge and the lead suspect is

murdered, Sydney's carefully
compartmentalized life threatens to unravel.
Has she always made the right choices,
knowing the inherent danger posed to those
around her? Vaughn and Jack are
understandably concerned. For a field agent,
even the tiniest loss of focus can prove
deadly....

The complexity of living
organisms surpasses our
unaided habilities of
analysis. Hence,
computational and
mathematical methods are

necessary for increasing our understanding of biological systems. At the same time, there has been a phenomenal recent progress allowing the application of novel formal methods to new domains. This progress has spurred a conspicuous optimism in computational biology. This optimism, in turn, has promoted a rapid increase in collaboration between specialists of biology with specialists of computer science. Through sheer complexity, however, many important biological problems

are at present intractable, and it is not clear whether we will ever be able to solve such problems. We are in the process of learning what kind of model and what kind of analysis and synthesis techniques to use for a particular problem. Some existing formalisms have been readily used in biological problems, others have been adapted to biological needs, and still others have been especially developed for biological systems. This Research Topic has examples of cases (1) employing existing

methods, (2) adapting methods Expedition/Navigator Wiring to biology, and (3) developing Diagrams International Indian new methods. We can also see Ocean Expedition, USC&GS Ship discrete and Boolean models, Pioneer, 1964: Primary and the use of both simulators productivity and plankton and model checkers.
