If you have ever wondered when visiting the pharmacy how the dosage of your prescription is determined this book will answer your questions. Dosing information on drug labels is based on discussion between the pharmaceutical manufacturer and the drug regulatory agency, and the label is a summary of results obtained from many scientific experiments. The book introduces the drug development process, the design and the analysis of clinical trials. Many of the discussions are based on applications of statistical methods in the design and analysis of dose response studies. Important procedural steps from a pharmaceutical

Symptoms in the Pharmacy is the indispensable guide to the management of common symptoms seen in the pharmacy. Designed for quick and easy reference with separate chapters for each ailment, each chapter incorporates a decision making framework in which the information necessary for treatment and suggestions on 'when to refer' is distilled into helpful summary boxes. Decision making support is provided in cases involving ethical dilemmas. It also includes example case studies providing the view of pharmacists and doctors and, in their own words, patient perspectives of what it is like to live with and manage conditions such as migraine and eczema. These easy-to-follow chapters can be read cover to cover or turned to for quick reference. This seventh edition covers the availability of new medicines and includes new sections and case studies for 'POM' to 'P' switches. It continues to draw upon the latest evidence for treatment guidelines and includes

expanded coverage of common infectious diseases and important safety advice on the use of medicines in children. It also features colour photographs of skin conditions enabling the differentiation and diagnosis of common skin complaints. With advice from a pharmacist and GP author team, Symptoms in the Pharmacy covers ailments which will be encountered in the pharmacy on a daily basis and should be kept close at hand for frequent consultation.

McGraw Hill Professional  
A book that provides mnemonics and questions, answers, and rationales for the Pharmacy Technician licensing exams. Whether you are taking the Pharmacy Technician Certification Exam (PTCE) which

some call the PTCB which actually stands for the name of the organization, the Pharmacy Technician Certification Board, or the ExCPT, Exam for the Certification of Pharmacy Technicians administered by the National Healthcareer Association (NHA), there will be a point where you start taking a lot of practice exams. What I want to do with this book, that's a little different than the Memorizing Pharmacology: A Relaxed Approach, Second Edition parent book, is talk about how to memorize what you learned from taking and reviewing those exams so you can have all of those questions and answers in your long-term memory as you enter the ultimate licensing exam. In Memorizing Pharmacology: A Relaxed Approach, Second Edition, I introduced the acronym GMRINCE, where you start by memorizing the seven pathophysiologic classes in the book in order as G-M-RINCE, as Grand Mothers RINCE kids' hair (except it's the French r-i-n-c-e instead of the English r-i-n-s-e) to set up the broadest framework. These seven pathophysiologic classes help as steel reinforcing bars that, when surrounded by concrete, will provide the foundation for your memorizing the gastrointestinal (G), musculoskeletal (M), respiratory (R), immune (I), neuro (N), cardio (C), and endocrine (E) systems' medications. Students would take the mnemonic and put it on a notecard for later practice. For the licensing exam, we are going to create a way to sort our 3 x 5 notecards into twelve distinct piles, rather than seven.

Personally, I would do this all in twelve tabs of an Excel spreadsheet, but do what works for you. I will now add five more letters to make a 12-letter acronym for pharmacy technicians, "GM RINCED ALSO," G-M-R-I-N-C-E-D-A-L-S-O adding Dosage Calculations, (D), Abbreviations, Acronyms, and Initialisms, (A), Laws and Regulations, (L), Supplements, (S), and Other Questions (O). We can use very Pharmacy Technician specific mnemonics to memorize drugs that need to be taken with water or that a patient should use sunscreen, for example.
