Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

The intricate relationships between music and human neurological makeup, as well as the ways in which music can influence neurological development, are explored in this volume, which is a continuation and expansion of two symposia that have preceded it, both of which have been published as Annals volumes. Researchers in the fields of neurophysiology, neuroimaging, mind-brain studies, and psychology present findings on the evaluation of neurological disorders and music, the relationship of music to development and language, and musical perception. The use and impact of music therapy is discussed in a roundtable format. Do animals have music? How is music similar to language? How is music represented mentally? This volume addresses these questions and others surrounding this exciting and growing field—a field that generates interest far beyond the boundaries of the neuroscientific world, encompassing education, performance, and the appreciation of music by all peoples. The book also offers articles written from the perspective of the fields of ethology and evolution, as well as papers on vocal learning, auditory perception, performance, and emotional response to music.
