Mathematical Statistics with A pplications in R, Second Edition, offers a modern calculus-based theoretical introduction to mathematical statistics and applications. The book covers many modern statistical computational and simulation concepts that are not covered in other texts, such as the Jackknife, bootstrap methods, the EM algorithms, and Markov chain Monte Carlo (MCMC) methods such as the Metropolis algorithm, Metropolis- Hastings algorithm and the
Gibbs sampler. By combining the discussion on the theory of statistics with a wealth of real-world applications, the book helps students to approach statistical problem solving in a logical manner. This book provides a step-by-step procedure to solve real problems, making the topic more accessible. It
includes goodness of fit methods to identify the probability distribution that characterizes the probabilistic behavior or given set of data. Exercises as well as practical, real-w orld chapter projects are included, and each chapter has an optional section on using Minitab, SPSS and SA S commands. The text also boasts a wide array of coverage of ANOVA solutions to selected problems; data sets; and an image ba solutions to selected problems; data sets; and an image bank

Founded in 1959 with the purpose of disseminating the most recently developed scientific information to groups in industry, government, high schools, and universities, REA has since become a successful and highly respected publisher of study aids, test preps, handbooks, and reference works. RE Test Preparation series includes study guides for all
academic levels in almost all disciplines. Research \& Education A ssociation publishes test preps for students who have not yet completed high school, as well as high school students preparing to enter college. Students from countries around the world seeking to attend college in the United States will find the assistance they need in REA's publications. For college students seeking advanced degrees REA publishes test preps for many major graduate school admission examinations in a wide variety of disciplines,
including engineering, law, and medicine. Students at every level, in every field, with every ambition can find what they
are looking for among REA's publications. While most test preparation books present practice tests that bear little resemblance to the actual exams, REA's series presents test that accurately depict the official exams in both degree of difficulty and ty pes of questions. REA's practice tests are alw ay s based upon the most recently administered exams and include every type of question that can be expected on the actual exams. REA 's publications and educational materials are highly regarded and continually receive an unprecedented amount of praise from professionals, instructors, librarians, parents, and students. Our authors are as diverse as the fields represented in the books we publish. They are well-known in their respective disciplines and ser
on the faculties of prestigious high schools, colleges, and universities throughout the United States and Canada. Chapter 1 - SUCCEEDING IN AP STATISTICS The objective of this book is to prepare you for the Advanced Placement Examination in Statistics by providing you with an accurate representation of the test. T ow ard that end, we provide an extensive review and practice tests that cover the material one would expect to study in a ty pical Advanced Placemen course and see on the exam itself. Six full-length practice Statistics exams are provided. Following each practice exam is an answer key and a detailed explanation for every question. The explanations not only provide the correct response but also explain why none of the remaining answ is the best choice. By study ing the appropriate review sections, taking the corresponding exams, and study ing the answer explanations, you can discover your strengths and weaknesses, and prepare yourself to score well on the AP Statistics examination. ABOUT THE ADVANCED PLACEMENT PROGRAM The Advanced Placement program consists of two components: an AP course and an AP exam. Advanced Placement examinations are offered each May at participating schools and multischool centers throughout the world. The A dvanced Placement program is designed to provide high school students with the opportunity to pursue college-level studies while still attending high school. In turn, the participating colleges grant credit and/or advanced placement to students who do well on the examination. The AP Statistics course is designed to represent the content of ty pical introductory college course in statistics. The full-y ear course covers the skills and know ledge expected of students in the field of introductory statistics. The course is intended for high school students who wish to complete studies equivalent to a one-semester, non-calculus-based college course in statistics. Additional information about the AP program and the AP Statistics exam is available by contacting: AP Services Educational T esting Service P.O. Box 6671 Princeton, NJ 08541-6671 Phone: (609) 771-7300 Fax (609) 530-0482 E-mail: apexams@ ets.org Website: http: //Www.collegeboard.com THE AP ST ATISTICS EXAM The AP Statistics exam lasts 180 minutes and is divided into two sections: I. Multiple-Choice ( $50 \%$ of y our grade) : T his 90 -minute section is composed of 35 questions designed to test y our proficiency in a wide variety of topics. The questions test examinees' ability to explore data, plan a statistical study, anticipate patterns, and make statistical inferences. II. Free-Response (a combined 50\% of y our grade): This 90 -minute section requires the student to answer four to seven open-ended questions and to complete one investigative task question involving more extended reasoning. Each open-ended question has been created to be answered in approximately 10 minutes. The longer
investigative-task question has been created to be answered in approximately 30 minutes. The questions require students to relate different content areas as they plan an extensive solution to a statistics or probability problem. Students are expected to use their analy tical and organizational skills to formulate cogent answers in writing their responses. It will be expected that students will show enough of their work to allow the readers to be able to follow their logic. Note that it is not necessary to write out routine statistical calculations that can be done on a calculator. Each student is expected to bring a calculator with statistical capabilities to the examination. The computational capabilities of the calculator should include common univariate and bivariate summaries through linear regression. The graphical capabilities of the calculator should include common univariate and bivariate displays such as boxplots, histograms, and scatterplots. Mos graphing calculators on the market are acceptable; nongraphing calculators are allowed only if they have the computational capabilities described previously. The following, however, are not permitted: powerbooks and portable computers, pocket organizers, electronic writing pads, pen input devices, or devices with ty pew riter-sty le, or
QWERT $Y$ keyboards. ABOUT T HE REVIEW SECTIONS A mentioned earlier, this book has a review chapter for each of the four topics covered on the exam. The following are the four review chapters in this book that cover the topics on the AP Statistics: - Exploring Data - Planning a Study Anticipating Patterns - Statistical Inferences The review chapters provide a thorough discussion of the material tested
on the exam. By studying the review chapters and by taking the practice test(s), you can prepare yourself to score high on the AP Statistics exam. SCORING THE EXAM The multiple-choice section of the exam is scored by crediting each correct answer with one point and deducting one-fourth of a point for each incorrect answer. Unanswered questions questions are graded by readers chosen from around the country for their familiarity with the AP Program. Each freeresponse question is read and scored with the reader
providing the score on a 0 -to- 4 ( 0 being the lowest and 4 the highest) scale. The free-response questions are scored base on the statistical knowledge and communication the student used to answer the question. The statistical know ledge criteria include identify ing the important concepts of the problem and demonstrating statistical concepts and techniques that result in a correct solution of the problem. The communication criteria include an explanation of what was done and why, along with a statement of conclusions drawn. Once the free-response questions have been graded by all of the readers, the scores are converted. The openended questions count as $75 \%$ of the free-response score; the investigative-task question counts as $25 \%$. SCORING THE MULTIPLE-CHOICE SECTION For the multiple-choice section, use this formula to calculate your raw score: Number Right - (Number Wrong $\times 1 / 4$ ) $=$ Raw Score (round to the nearest whole number) Note: Do not include unanswered questions in the formula. SCORING THE FREE-RESPONSE QUESTIONS For the free-response section, use this formula to calculate y our raw score: 5 Open-Ended Questions ( $75 \%$ ) +1 Investigative-T ask Question ( $25 \%$ ) = Raw Score THE COMPOSITE SCORE To obtain your composite score, use the following method: Multiple-Choice Raw Score + FreeResponse Raw Score = Raw Score AP grades are interpreted as follows: 5 -extremely well qualified, 4 -w ell qualified, 3 -qualified, 2 -possibly qualified, and 1 -no recommendation. scores that receive college credit andor ADVANCED PLACEMENT Most colleges grant students who earn at least a " 3 " college credit and/or advanced placement. You should check with your school guidance office about specific college requirements. ST UDYING FOR YOUR AP EXAMINATION It is never too early to start study ing. The earlier you begin, the more time you will have to shar pen y our skills. Do not procrastinate! Cramming is not an effective way to study, since it does not allow you the time needed to learn the test material. It is very important for you to choose the time and place for study ing that works best for you. Some students may set aside a certain number of hours every morning to study, while others may choose to study at night before going to sleep. Other students may study during the day, while waiting on a line, or even while eating lunch. Only you can determine when and where your study time will be most effective. But be consistent and use y our time wisely. Work out a study routine and stick to it! When you take the practice exam(s), try to make your testing conditions as much like the actual test as possible. Turn your television and radio off, and sit down at a quiet table free from distraction. Make sure to time y our self. Complete the practice test(s), score your test(s) and thoroughly review the explanations for the questions you answered incorrectly. However, do not review too much during any one sitting. question and explanation, and by study ing our review(s) until you are confident that you completely understand the material. Since y ou will be allowed to write in your test booklet during the actual exam, you may want to write in the margins and spaces of this book when practicing. However, do not make miscellaneous notes on your answer sheet. Mar your answers clearly and make sure the answer you have chosen corresponds to the question you are answering. Keep track of your scores! T his will enable y ou to gauge your progress and discover general weaknesses in particular sections. You should carefully study the reviews that cover the topics causing you difficulty, as this will build your skills in those areas. To get the most out of your study ing time, we recommend that you follow the Study Schedule. It details how y ou can best budget y our time. TEST-TAKING TIPS Although you may be unfamiliar with tests such as the Advanced Placement exams, there are many ways to acquaint y ourself with this ty pe of examination and help alleviate your test-taking anxieties. Listed below are ways to help y ourself become accustomed to the AP exam, some of which may also be applied to other standardized tests. Become comfortable with the format of the AP Examination in Statistics. When you are practicing to take the exam(s), simulate the conditions under which you will be taking the actual test(s). You should practice under the same time constraints as well. Stay calm and pace yourself. A fter simulating the test only a couple of times, y ou will boost y our chances of doing well, and y ou will be able to sit dow $n$ for the actual test much more confidently. Know the directions and format for each section of the exam. Familiarizing y ourself with the directions and format of the different test sections will not only save y ou time, but will also ensure that you are familiar enough with the AP exam to avoid anxiety (and the mistakes caused by being anxious) Work on the easier questions first. If you find yourself working too long on one question, make a mark next to it in your test booklet and continue. A fter you have answered al of the questions that you can, go back to the ones y ou have skipped. Use the process of elimination when you are unsure of an answer. If you can eliminate three of the answer choices, y ou have given y ourself a fifty - fifty chance of getting the item correct since there will only be two choices left from which to make a guess. If y ou cannot eliminate at least three of the answer choices, you may choose not to guess, as you will be penalized one-quarter of a point for every incorrect answer. Questions not answered will not be counted. Be sure that you are marking your answer in the oval that corresponds with the correct item in the test booklet. Since the multiple-choice section is graded by machine, marking the wrong answer will throw off y our score.
