Our Biometric Future World Scientific

Since the 1960s, a significant effort has been underway to program computers to “ see ” the human face—to develop automated

systems for identifying faces and distinguishing them from one another—commonly known as Facial Recognition Technology. While computer scientists are developing FRT in order to design more intelligent and interactive machines, businesses and states agencies view the technology as uniquely suited for “ smart ” surveillance—systems that automate the labor of monitoring in order to increase their efficacy and spread their reach. Tracking this technological pursuit, Our Biometric Future identifies FRT as a prime example of the failed technocratic approach to governance, where new technologies are pursued as shortsighted solutions to complex social problems. Culling news stories, press releases, policy statements, PR kits and other materials, Kelly Gates provides evidence that, instead of providing more security for more people, the pursuit of FRT is being driven by the priorities of corporations, law enforcement and state security agencies, all convinced of the technology ’ s necessity and unhindered by its complicated and potentially destructive social consequences. By focusing on the politics of developing and deploying these technologies, Our Biometric Future argues not for the inevitability of a particular technological future, but for its profound contingency and contestability.

Comparative Stylistics of French and English
Cengage Learning

The Stylistique compar é e du fran ç ais et de l'anglais has become a standard text in the French-speaking world for the study of comparative stylistics and the training of translators. This updated, first English edition makes Vinay & Darbelnet's classic methodology of translation available to a wider readership. The translation-oriented contrastive grammatical and stylistic analyses of the two languages are extensively exemplified by expressions, phrases and texts. Combining description with methodological guidelines for translation, this volume serves both as a course book and through its detailed index and glossary as a reference manual for

specific translation problems.

A Brookings Institution Press and Ash Center for Democratic Governance and Innovation publication The Innovations in American Government Awards Program began in 1985 with a grant from the Ford Foundation to the Kennedy School of Government at

Harvard to conduct a program of awards for innovations in state and local government. The foundation's objective was ambitious and, in an era of "government is the problem" rhetoric, determinedly proactive. It sought to counter declining public confidence in government by highlighting innovative and effective programs. Over twenty years later, research, recognition, and replication are the source of the program's continuing influence and its vitality. What is the future of government innovation? How can innovation enhance the quality of life for citizens and strengthen democratic governance? Innovations in Government: Research, Recognition, and Replication answers these questions by presenting a comprehensive approach to advancing the practice and study of innovation in government. The authors discuss new research on innovation, explore the impact of several programs that recognize innovation, and consider challenges to the replication of innovations. Contributors include Eugene Bardach (University of California – Berkeley), Robert Behn

(Harvard University), John D. Donahue (Harvard University), Marta Ferreira Santos Farah (Center for Public Administration and Government, Fundação Getúlio Vargas), Archon Fung (Harvard University), Jean Hartley (University of Warwick), Steven Kelman (Harvard University), Gowher Rizvi (Ash Institute for Democratic Governance and Innovation, Harvard University), Peter Spink (Center for Public Administration and Government, Fundação Getúlio Vargas), and Jonathan Walters (Governing).

This book provides a self-contained description of the measurements of the magnetic dipole moments of the electron and muon, along with a discussion of the measurements of the fine structure constant, and the theory associated with magnetic and electric dipole moments. Also included are the searches for a permanent electric

dipole moment of the electron, muon, neutron and atomic nuclei. The related topic of the transition moment for lepton flavor violating processes, such as neutrinoless muon or tauon decays, and the search for such processes are included as well. The papers, written by many of the leading authors in this field, cover both the experimental and theoretical aspects of these topics. Sample Chapter(s). Chapter 1: Historical Introduction to Electric and Magnetic Moments (367 KB). Contents: Historical Introduction (B L Roberts); Electromagnetic Dipole Moments and New Physics (A Czarnecki & W J Marciano); Lepton $g - 2$ from 1947 to Present (T Kinoshita); Analytic QED Calculations of the Anomalous Magnetic Moment of the Electron (S Laporta & E Remiddi); Measurements of the Electron Magnetic Moment (G Gabrielse); Determining the Fine Structure Constant (G Gabrielse); Helium Fine Structure Theory for the Determination of α (K Pachucki & J Sapirstein); Hadronic Vacuum Polarization and the Lepton Anomalous Magnetic Moments (M Davier); The Hadronic Light-by-Light Contribution to a_μ (J Prades et al.); General Prescriptions for One-loop Contributions to a_μ (K R Lynch); Measurement of the Muon ($g - 2$) Value (J P Miller et al.); Muon ($g - 2$) and Physics Beyond the Standard Model (D StAcker); Probing CP Violation with Electric Dipole Moments (M Pospelov & A Ritz); The Electric Dipole Moment of the Electron (E D Commins & D DeMille); Neutron EDM Experiments (S K Lamoreaux & R Golub); Nuclear Electric Dipole Moments (W C Griffith et al.); EDM Measurements in Storage Rings (B L Roberts et al.); Models of Lepton Flavor Violation (Y Okada); Search for the Charged Lepton-Flavor-Violating Transition

Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer ' s personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such

as:

- physical principles of various material handling systems;
- considerations in selecting technically efficient and environmentally friendly equipment;
- best practices in upgrading and optimizing existing bulk material handling facilities;
- strategies to select proper equipment in the early phases of a new project.

Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.
