I think it's interesting though. I think it's interesting that in some sense that that's all happiness is, for surely if everyone were the freckle in the tar then there would be no tar-then we would all wish to be the tar bit in the freckles. If everyone were pyscho-drunk-cut-al-l-their-fingers-off-with-a-steak-knife-f*cked-up at the bar, then who in the f*ck would really think it interesting to put such a story in the news? If everyone wore a smile and you

never saw even one cloud in the wink of all your days then who in the f*ck would be relieved by another? And it's fun to twist and spit on the plot-fun to run the f*cking lawn mower through the fence and see how far it goes-fun to take your mattress outside and jump on it naked in the middle of the street-but oh my oh my if we didn't make each other feel like a night cry in the murmur then we would have no reason to murder each other and oh my oh my what a pleasure it is to murder each other-what a pleasure it is for me to come home and cry-to stop crying and stop being such a pussy-to not stop stopping being such a pussy and fill-up a red-container with Mario's juice and burn Uber to my feet-make them feel like me-make them lose the one-moment that feels to be the one that lasts-make them unmake them.

Throughout the world, research and development in the field of vehicle transportation is increasingly focusing on engine and fuel combinations. The conventional and alternative fuels of the future are seen as fundamental to the development of a new generation of internal combustion engines that attain low well-to-wheel CO2 emissions along with near-zero pollutant emissions. These issues were debated during an international conference whose proceedings are presented in this book. This international conference attracted specialists in the field, including participants from universities, research centres and industry.

Contents : Future of liquid fuels, Engine and fuel-related issues in HCCI & CAI

combustion, Energy conversion in engines from natural gas, Use of hydrogen in IC engines, Which fuels for low CO2 engines?

Since 2008, while the global automotive manufacturing has been faltering, the Chinese auto industry has been swiftly transformed into the largest producer in the world. The growth of the Chinese automakers is a close reflection of China's powerful manufacturing economy, and Geely Auto is one such best example. This book closely examines the rise of Geely as a privately-owned automaker in China. From its humble beginning as a refrigerator component maker and motorcycle manufacturer in the late twentieth century, Geely has grown to become not only a top selling national brand in China, the largest auto market in the world, but also a significant player in the global automotive industry. The book studies Geely's successful acquisition of Volvo, within a long-term framework of asset-seeking foreign direct investment, and then further investigates its recent strategic initiatives with Daimler, London Taxi, PROTON and Lotus. The book reveals how the little-known carmaker is worth close examination, via its product development, organizational dynamics, corporate culture, brand development, talent and cross-cultural management strategies, as well as the entrepreneurship of its visionary founder Shufu Li. From catching up in technology to a leader in product, service and business model innovations, Geely has driven out as a new Chinese automaker on the world stage. Facing

challenges in clean energy and Internet of Things, artificial intelligence, new user's experience towards smart and mobility solution, Geely will continue to play an increasingly important role in the globalization age of the twenty-first century.
