John Denver was

America's biggest-selling solo star of the '70s. In

commercial terms he was on a par with

Sinatra in the '40s, Elvis in the '50s and the Beatles in the '60s. He experimented with a variety of

styles and won fans from such diverse worlds as folk, pop and country music. Beneath the often tranquil surface of his music and his clear, clean tenor voice, however, lurked a darker side to Denver's character. The writer of 'Annie's Song', one of the most straightforward and personal expressions of love, became a wife-beater. The man who cavorted with the Muppets was an alcoholic. The committed environmentalist had his own plane, the most polluting form of transport. John Collis has delved deep to discover exactly who John Denver was. By unravelling the complexities of the singer's personality and background, he reveals Denver as a complicated, contradictory man, much more intriguing than the sometimes placid surface of his music might suggest. Millions of people around the globe found something in his music that touched their souls; Collis, by charting Denver's career and development as an artist, explores his legendary contribution not only to the world of music but also to the society of which he was a protagonist and a victim.

How to design a world in which we rely less on stuff, and more on people. We're filling up the world with technology and devices, but we've lost sight of an important question: What is this stuff for? What value does it add to our lives? So asks author John Thackara in his new book, *In the Bubble: Designing for a Complex World*. These are tough questions for the pushers of technology to answer. Our economic system is centered on technology,

so it would be no small matter if "tech" ceased to be an end-in-itself in our daily lives.

Technology is not going to go away, but the time to discuss the end it will serve is before we deploy it, not after. We need to ask what purpose will be served by the broadband communications, smart materials, wearable computing, and connected appliances that we're unleashing upon the world. We need to ask what impact all this stuff will have on our daily lives. Who will look after it, and how? In the *Bubble* is about a world based less on stuff and more on people. Thackara describes a transformation that is taking place now—not in a remote science fiction future; it's not about, as he puts it, "the schlock of the new" but about radical innovation already emerging in daily life. We are regaining respect for what people can do that technology can't. In the *Bubble* describes services designed to help people carry out

daily activities in new ways. Many of these services involve technology—ranging from body implants to wide-bodied jets. But objects and systems play a supporting role in a people-centered world. The design focus is on services, not things. And new principles—above all, lightness—inform the way these services are designed and used. At the heart of *In the Bubble* is a belief, informed by a wealth of real-world examples, that ethics and responsibility can inform design decisions without impeding social and technical innovation.
