This report presents the results of the project Safe Future Inland Transport Systems (SafeFITS), which aims to develop a robust road safety decision-making tool to support the most appropriate road safety policies and measures to achieve tangible results. Road accidents constitute a major social problem in modern societies, accounting for more than 1 million accidents per year in EU-28 (2,900 per day), resulting in 1.4 million injuries and 26,000 fatalities. Current trends suggest that, unless action is taken, traffic injuries will become the fifth leading cause of death by 2030, with the disparity between high-income and low-income countries further increased.

Many of the challenges that decision-makers grapple with in relation to climate change are governance related. Planning and decision-making is evolving in ambiguous institutional environments, in which many key issues remain unresolved, including relationships between different actors; funding arrangements; and the sources and procedures for vetting data. These issues are particularly acute at this juncture, as climate adaptation moves from broad planning processes to the management of infrastructure systems. Concrete decisions must be made.

Adapting Infrastructure to Climate Change draws on case studies of three coastal cities situated within very different governance regimes: neo-corporatist Rotterdam, neo-pluralist Boston and semi-authoritarian Singapore. The book examines how infrastructure managers and other stakeholders grappling with complex and uncertain climate risks are likely to make project-level decisions in practice, and how more effective decision-making can be supported. The differences across governance regimes are currently unaccounted for in adaptation planning, but are crucial as best practices are devised. These lessons are also applicable to infrastructure planning and decision-making in other contexts. This book will be of great interest to scholars of climate change and environmental policy and governance, particularly in the context of infrastructure management.

The Anglo-Boer War (1899-1902) is one of the most intriguing conflicts of modern history. It has been labeled many things: the first media war, a precursor of the First and Second World Wars, the originator of apartheid. The difference in status and resources between the superpower Great Britain and two insignificant Boer republics in southern Africa was enormous. But, against all expectation, it took the British every effort and a huge sum of money to win the war, not least by unleashing a campaign of systematic terror against the civilian population. In *The Boer War*, winner of the Netherlands's 2013 Libris History Prize and shortlisted for the 2013 AKO Literature Prize, the author brings a completely new perspective to this chapter of South African history, critically examining the involvement of the Netherlands in the war. Furthermore, unlike other accounts, Martin Bossenbroek explores the war primarily through the experiences of three men uniquely active during the bloody conflict. They are Willem Leyds, the Dutch lawyer who was to become South African Republic state secretary and eventual European envoy; Winston Churchill, then a British war reporter; and Deney's Reitz, a young Boer commando. The vivid and engaging experiences of these three men enable a more personal and nuanced story of the war to be told, and at the same time offer a fresh approach to a conflict that shaped the nation state of South Africa.
