Business Marketing Management Dundurn

The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines. The majority of these courses today emphasize the application of thermodynamics to engine ef?ciency, performance, combustion, and emissions. There are several very good textbooks that support education in these aspects of engine development. However, in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development. University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well. My colleagues and I have undertaken the development of a series of graduate courses in engine design and mechanical development. In doing so it becomes quickly apparent that no suitable te- book exists in support of such courses. This book was written in the hopes of beginning to address the need for an engineering-based introductory text in engine design and mechanical development. It is of necessity an overview. Its focus is limited to reciprocating-piston internal-

combustion engines – both diesel and spa- ignition engines.

Emphasis is speci?cally on automobile engines, although much of the discussion applies to larger and smaller engines as well. A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry. It is intended to provide basic information and most of the chapters include recent references to guide more in-depth study.

Thomas Register of American Manufacturers University of Wales Press

This book is about all the information Kyle learned over his 31 years of interest in solar power. This includes all the information you need to become 100% utility independent. The possibilities of sun electricity (solar power), rain, radiant heat, geothermal, battery banks, inverters, ac-dc lighting, water storage-recycling-filtration, water heating, wire sizing, refrigeration, cooking, fuses, conservation, photovoltaic solar panel positioning/placement, grid-tie, parallel, standalone systems, as well as an overview of how we got here through the inventions of Tesla, Franklin, Einstein, and Edison all are mentioned in this manual.
