One of the most remarkable mechanized campaigns of recent years pitted the brutal and heavily armed jihadis of Islamic State against an improvised force belonging to the Kurdish YPG (later the SDF). While some Kurdish vehicles were originally from Syrian Army stocks or captured from ISIS, many others were extraordinary homemade AFVs based on truck or digger mechanicals, or duskas, the Kurds' version of the technical. Before US air power was sent to Syria, these were the Kurds' most powerful and mobile weapons. Co-written by a British volunteer who fought with the Kurds and an academic expert on armoured warfare, this study explains how the Kurds built and used their AFVs in the war against 'Daesh', and identifies as far as possible which vehicles took part in major battles, such as Kobane, Manbij and Raqqa. With detailed new artwork depicting the Kurds' range of armour and many previously unpublished photos, this is an original and fascinating look at modern improvised mechanized warfare.

Radiation can be absorbed and re-emitted many times in atomic vapors before it reaches the boundaries of the container encasing the vapor. This effect is known as radiation trapping. It plays an important role practically everywhere atomic vapors occur, whether in spectroscopy, gas lasers, atomic line filters, the determination of atomic lifetimes, measurements of atomic interaction potentials, or electric discharge lamps. This book is the first to assemble all of the information necessary to handle practical problems related to radiation trapping, and it emphasizes both physical insights and mathematical methods. The introduction reviews resonance radiation and collision processes in atomic vapors. This is followed by detailed explanations of the physical effects and mathematical methods for various types of problems (e.g., with or without saturation, particle diffusion, reflecting cell walls). The last part of the book describes the applications of these methods to a variety of practical problems, such as cross-section measurements and the design of discharge lamps.

The Summary

FM 21-11 1943: Basic field manual, first aid for

soldiers.(OBSOLETE) "The purpose of this manual is to teach the soldier what he can do for himself or a fellow soldier if injury or sickness occurs when no medical officer or Medical Department soldier is nearby. Information is also given concerning the use of certain supplies which are for the purpose of helping to keep well. This field manual addresses wounds, fractures/dislocations/ sprains, common emergencies and health measures, effects of severe cold and heat, measures for use in the jungle/tropics and in aircraft and tank injuries, transportation of sick and injured, war gases, and description and uses of first-aid kits and packets.

[Chinese Power \(English\)](#)

Do you think Chinese tanks and models are not interesting? Wait to see this book ... Until now is the most complete, detailed and exhaustive study about PLA for modelers ever done. This book is not only having historians in mind but also for modelers and readers that can be interested to know something more about the Chinese army power. After reading this book many modelers will have much more interest in building a Chinese vehicle as next model. Through its pages we will discover not only the power and main weapons of the Chinese PLA since its origins, but also the way to paint them, showing different techniques and camouflages for the Chinese vehicles. The kits which appear in this book, belong to the main Chinese brands, and makes this book the perfect guide not only for modelers and enthusiasts of Chinese tanks and its strange and exotic camouflages but also for any modelers that want to have a reference book. Modelers and historians like Adam Wilder, Kristof Pulinks, Lukasz Orczyyc-Musialek, Lester Plaskitt, Sven Frich, Zach Sex, Gordon Arthur, Lei Xu, Verlag Jochen, Chris Jerret, Oscar Ebr í , Brian Murdoch or David Bocquetel give us an idea of the quality of this publication that until now is the most complete, detailed and exhaustive study about PLA for modelers ever done.

Finally, a rebuild and performance guide for GM 6.2 and 6.5L diesel engines! In the late 1970s and early 1980s, there was considerable pressure on the Detroit automakers to increase the fuel efficiency for their automotive and light-truck lines. While efficient electronic engine controls and computer-controlled gas engine technology was still in the developmental stages, the efficiency of diesel engines was already well documented during this time period. As a result, General Motors added diesel engine options to its car and truck lines in an attempt to combat high gas prices and increase fuel efficiency. The first mass-produced V-8 diesel engines of the era, the 5.7L variants, appeared in several General Motors passenger-car models beginning in 1978 and are often referred to as the Oldsmobile Diesels because of the number of Oldsmobile cars equipped with this option. This edition faded from popularity in the early 1980s as a result of falling gas prices and quality issues with diesel fuel suppliers, giving the cars a bad reputation for dependability and reliability. The 6.2L appeared in 1982 and the 6.5L in 1992, as the focus for diesel applications shifted from cars to light trucks. These engines served faithfully and remained in production until 2001, when the new Duramax design replaced it in all but a few military applications. While very durable and reliable, most of these engines have a lot of miles on them, and many are in need of a rebuild. This book will take you through the entire rebuild process step by step from diagnosis to tear down, inspection to parts sourcing, machining, and finally reassembly. Also included is valuable troubleshooting information, detailed explanations of how systems work, and even a complete Stanadyne DB2 rebuild section to get the most out of your engine in the modern era. If you have a 6.2, or 6.5L GM diesel engine, this book is a must-have item for your shop or library.
