One of the most remarkable mechanized campaigns of recent years pitted the brutal and heavily armed jihadis of Islamic State against an improvised force belonging to the Kurdish YPG (later the SDF). While some Kurdish vehicles were originally from Syrian Army stocks or captured from ISIS, many others were extraordinary homemade AFVs based on truck or digger mechanicals, or duskas, the Kurds' version of the technical. Before US air power was sent to Syria, these were the Kurds' most powerful and mobile weapons. Co-written by a British volunteer who fought with the Kurds and an academic expert on armoured warfare, this study explains how the Kurds built and used their AFVs in the war against

'Daesh', and identifies as far as possible which vehicles took part in major battles, such as Kobane, Manbij and Raqqa. With detailed new artwork depicting the Kurds' range of armour and many previously unpublished photos, this is an original and fascinating look at modern improvised mechanized warfare.

Do you think Chinese tanks and models are not interesting? Wait to see this book ... Until now is the most complete, detailed and exhaustive study about PLA for modelers ever done. This book is not only having historians in mind but also for modelers and readers that can be interested to know something more about the Chinese army power. After reading this book many modelers

will have much more interest in building a Chinese vehicle as next model.

Through its pages we will discover not only the power and main weapons of the Chinese PLA since its origins, but also the way to paint them, showing different techniques and camouflages for the Chinese vehicles. The kits which appear in this book, belong to the main Chinese brands, and makes this book the perfect guide not only for modelers and enthusiasts of Chinese tanks and its strange and exotic camouflages but also for any modelers that want to have a reference book. Modelers and historians like Adam Wilder, Kristof Pulinks, Lukasz Orczyyc-Musialek, Lester Plaskitt, Sven Frich, Zach Sex, Gordon Arthur, Lei Xu, Verlag Jochen, Chris Jerret, Oscar Ebr í , Brian Murdoch or David Bocquelet give us an idea of the quality of this publication that until now is the most complete, detailed and exhaustive study about PLA for modelers ever done.

Scientific American

Radiation from spectral lines can be absorbed and re-emitted many times in atomic vapours before it reaches the boundaries of the container encasing the vapour. This effect is known as radiation trapping. It plays an important role practically everywhere where atomic vapours occur, e.g. in spectroscopy, in gas lasers, in atomic line filters, in the determination of atomic lifetimes, in measurements of atomic interaction potentials, and in electric discharge lamps. This book for the first time assembles all the information necessary for a treatment of practical problems, emphasizing both physical insights and mathematical methods. After an introduction that reviews resonance radiation and collisional processes in atomic vapours, physical effects and mathematical methods for various types of problems (e.g. with or without saturation, particle diffusion, reflecting cell walls, etc.) are explained in detail. The last part of the book describes the applications of these methods to a variety of practical problems like cross-section measurements or the design of discharge lamps.

The enlightening, best-selling book on understanding sustainable energy and how we can make energy plans that add up. If you've ever wondered how much energy we use, and where it comes from – and where it could come from – but are fed up with all the hot air and 'greenwash', this is the book for you. Renewable resources are 'huge', but our energy consumption is also 'huge'. To compare 'huge' things with each other, we need numbers, not adjectives. Sustainable Energy – without the hot air addresses the energy crisis

objectively, cutting through all the contradictory statements from the media, government, and lobbies of all sides. It gives you the numbers and the facts you need, in bite-sized chunks, so you can understand the issues yourself and organises a plan for change on both a personal level and an international scale – for Europe, the United States, and the world. In case study format, this informative book also answers questions surrounding nuclear energy, the potential of sustainable fossil fuels, and the possibilities of sharing renewable power with foreign countries. Written by David MacKay, who was an esteemed Professor of Engineering at the University of Cambridge and Chief Scientific Advisor to the UK Department of Climate Change, this is an uplifting, jargon-free and informative read for all. In it, David debunks misinformation and clearly explains the calculations of expenditure per person to encourage people to make individual changes that will benefit the world at large. If you've thrown your hands up in despair thinking no solution is possible, then read this book - it's an honest, realistic, and humorous discussion of all our energy options.

The Humvee, the modern-day US military four-wheel-drive successor to the Willys Jeep, is used by numerous armed forces around the world and in some civilian adaptations. Over 10,000 Humvees were deployed in numerous roles by coalition forces during the Iraq war. At least 25 variants of this highly versatile vehicle have been produced, from unarmoured light transport to surface-to-air missile platform, including ambulances, tracked versions, troop carriers and special ops variants. This manual provides a unique insight into the world of military Humvees, with an emphasis on military operation and equipment.
