Automotive manufacturers are required to decrease CO2 emissions and increase fuel economy while assuring driver comfort and safety. In recent years, there has been rapid development in the application of lightweight and sustainable materials in the automotive industry to help meet these criteria.

This book provides critical reviews and the latest research results of various lightweight and sustainable materials in automotive applications. It discusses current applications and future trends of lightweight materials in the automotive area. While there are a few books published mainly focusing on automotive applications of metallic lightweight materials, to date there is no available book focusing on a broad spectrum of lightweight materials, including metal, plastic, composites, bio-fiber, bio-polymer, carbon fiber, glass fiber, nanomaterials, rubber materials, and foaming materials, as this work does. The book also includes case studies of commercial lightweight automotive parts from sustainable lightweight materials, providing an invaluable resource to those involved in this in-demand research and commercialization area.

The novel is set in the summer of 1998 in New York City. Beneath the surface of the city, gangs of vampires have been living, preying on the dregs of society--the homeless, destitute, prostitutes--no one cares about. A crew of thieves robs vampire families robs vampire gangs of their money and blood, playing the vampires off against one another. A job goes wrong and they mess with a vampire they never should have, the Albanian Kreshnik, who serves the dark Lord Rainford.

Rainford's minions seek out and destroy Frank's crew one by one. Boone is the youngest and brashest of the humans. He's a racist, a drug addict, given to violence and can't shoot to save his life. Boone evidences supernatural attributes, such as the ability to heal rapidly from seemingly devastating injuries. He's also occasionally shadowed by a specter he refers to as Stan that only he can see. Boone feels an attraction to Emanuela, a witch-like character who hunts vampires and other creatures like them with "the Sisterhood." The novel culminates in Boone's confrontation against Rainford's army in an decrepit warehouse.

Semi-active Suspension Control provides an overview of vehicle ride control employing smart semi-active damping systems. These systems are able to tune the amount of damping in response to measured vehicle-ride and handling indicators. Two physically different dampers (magnetorheological and controlled-friction) are analysed from the perspectives of mechatronics and control. Ride comfort, road holding, road damage and human-body modelling are studied. Mathematical modelling is balanced by a large and detailed section on experimental implementation, where a variety of automotive applications are described offering a well-rounded view. The implementation of control algorithms with regard to real-life engineering constraints is emphasised. The applications described include semi-active suspensions for a saloon

car, seat suspensions for vehicles not equipped with a primary suspension, and control of heavy-vehicle dynamic-tyre loads to reduce road damage and improve handling.
