Collecting diecast toy cars has become an increasingly popular hobby over the last 25 years. Many of the classic diecast cars of the 1950s and 1960s are now valuable collectors' items, and surviving examples in mint and boxed condition regularly fetch significant sums at specialist auctions. This book provides a comprehensive survey of the companies that made these toys in the 1950s and 1960s, not only in Britain but in other European countries, the USA, Japan and beyond. Major names such as Dinky Toys, Corgi Toys, Spot-On and Matchbox (Great Britain), Solido (France), Marklin and Gama (Germany), Tekno (Denmark) and Tootsietoy (USA) are examined, but a unique feature of the book is the wealth of information provided on many smaller and more obscure brands. These include Crescent, Budgie, Chad Valley and Lone Star (UK), CIJ and JRD (France), Dalia (Spain), Buby (Argentina), Gamda (Israel) and many others about which information is hard to come by. A special chapter is devoted to early Japanese diecast models by

Cherryca Phenix, Model Pet and Diapet, which are among the rarest and most sought-after of all diecasts. Fascinating insights into company histories are provided, together with 250 photographs of rare examples of the toys themselves, in mint condition with their original boxes. A further unique feature is the inclusion of a large selection of colorful and evocative illustrations from catalogs and period trade advertisements. For the newcomer to the collecting hobby, this book will provide an ideal guide to the history of the manufacturers active in this field, while experienced collectors will make many new discoveries. At the end of the book, readers will find a handy glossary listing the names of many of the companies that manufactured diecast toy cars in the 1950s and 1960s.

Volkswagen Rabbit/Scirocco/Jetta Hal Leonard Corporation First published in 1983, this easy-to-follow guide to the Dragon 32 gives users a complete overview of the acclaimed machine that many considered well ahead of its time. Though it was more powerful and quicker than many of its competitors, the Dragon 32 never gained the success of other 8-bit computers of the day such as the Commodore 64 or the ZX Spectrum. Despite this, the classic machine still retains a dedicated following to this day. Not only is this remastered version perfect for hobbyists and collectors, it is also a highly useful resource for those interested in programming retro games and utilities. As the original publisher Melbourne House wrote: ***** A comprehensive overview of programming the Dragon 32, covering BASIC, machine language, sound and graphics. The Dragon 32 Programmer's Reference Guide will show you how to exercise the full potential of your Dragon 32, by taking you from simple BASIC routines right through to advanced machine language programs. The book fully examines BASIC and tells you everything you need to know to use every function to its maximum. Each facility is illustrated by example programs. Many professional hints and tips are included, demonstrating the full features of the Dragon 32, especially the graphics and sound potential. For the serious programmer, a memory map is included as well as 'monitor entry points' giving more information about the Dragon 32 than has ever been published anywhere else. This book will take you far beyond the realms of standard Dragon 32 programming. ***** Acorn Books is proud to present its Retro Reproductions series, a collection of classic computing works from the 80s and 90s given a new lease of life in the 21st century. From standards of programming reference no self-respecting microcomputer coder would be without, to obscure works

unavailable for many years, these modern re-prints are perfect for any connoisseur of retro computing.

Diecast Toy Cars of the 1950s & 1960s SAGE

This book has proved its worth over the years as a text for courses in Production Management at the Faculty of Automotive Engineering in Turin, Italy, but deserves a wider audience as it presents a compendium of basics on Industrial Management,

since it covers all major topics required. It treats all subjects from product development and “make or buy”-decision strategies to the manufacturing systems setting and management through analysis of the main resources needed in production and finally exploring the supply chain management and the procurement techniques. The very last chapter recapitulates the previous ones by analysing key management indicators to pursue the value creation that is the real purpose of every industrial enterprise. As an appendix, a specific chapter is dedicated to the basics of production management where all main relevant definitions, techniques and criteria are treated, including some numerical examples, in order to provide an adequate foundation for understanding the other chapters. This book will be of use not only to Automotive Engineering students but a wide range of readers who wish to gain insight in the world of automotive engineering and the automotive industry in general.
