A landmark comparative history of Europe and China that examines why the Industrial Revolution emerged in the West The Great Divergence sheds light on one of the great questions of history: Why did sustained industrial growth begin in Northwest Europe? Historian Kenneth Pomeranz shows that as recently as 1750, life expectancy,

consumption, and product and factor markets were comparable in Europe and East Asia. Moreover, key regions in China and Japan were no worse off ecologically than those in Western Europe, with each region facing corresponding shortages of land-intensive products. Pomeranz's comparative lens reveals the two critical factors resulting in Europe's nineteenth-century divergence—the fortunate location of coal and access to trade with the New World. As East Asia's economy stagnated, Europe narrowly escaped

the same fate largely due to favorable resource stocks from underground and overseas. This Princeton Classics edition includes a preface from the author and makes a powerful historical work available to new readers.

of modern management generally looks to the factories of England and New England for its genesis. But after scouring through old accounting books, Caitlin Rosenthal discovered that Southern planter-capitalists practiced an early form of scientific management. They took meticulous notes, carefully recording daily profits and productivity, and subjected their slaves to experiments and incentive strategies comprised of rewards and brutal punishment. Challenging the traditional depiction of slavery as a barrier to innovation, *Accounting for Slavery* shows how elite planters turned their power over enslaved people into a productivity advantage. The result is a groundbreaking investigation of business practices in Southern and West Indian plantations and an essential contribution to our understanding of slavery’s relationship with capitalism. “Slavery in the United States was a business. A morally reprehensible—and very profitable business...Rosenthal argues that slaveholders...were using advanced management and

This book examines the conceptual development of control in the literature of both management and accounting disciplines, from 1900 to 1980. In order to portray the development of control concepts over time, the chapters are organized into sections relating to the schools of thought from which they emanated and a model of control is constructed to represent each group of concepts and their hypothesised inter-relationships. Having traced the development of control models a comparative analysis of historical development in the two streams of management and accounting literature is undertaken. This analysis reveals a pronounced lag of accounting development behind that of management literature.

The reasons for this are then discussed.
