The human factors profession is currently attempting to take a more proactive role in the design of man-machine systems than has been characteristic of its past. Realizing that human engineering contributions are needed well before the experimental evaluation of prototypes or operational systems, there is a concerted effort to develop tools that predict how humans will interact with proposed designs. This volume provides an overview of one category of such tools: mathematical models of human performance. It represents a collection of invited papers from a 1988 NATO Workshop. The Workshop was conceived and organized by NATO Research Study Group 9 (RSG.9) on "Modelling of Human Operator Behaviour in Weapon Systems". It represented the culmination of over five years of effort, and was attended by 139 persons from Europe, Canada, and the United States. RSG.9 was established in 1982 by Panel 8 of the Defence Research Group to accomplish the following objectives: * Determine the utility and state of the art of human performance modelling. * Encourage

international research and the exchange of ideas. * Foster the practical application of modelling research. * Provide a bridge between the models and approaches adopted by engineers and behavioral scientists. * Present the findings in an international symposium.

This handbook examines the development and use of manuals to guide and support systemic couples and family therapies. It addresses the process of manualizing, providing a secure base for therapist creativity rather than delineating prescriptive procedures.

The volume addresses therapist and trainer concerns by demonstrating the value of sufficiently articulating clinical and teaching models to inform colleagues of what actually occurs during therapy. The book describes the history, value, and controversies of manuals. In addition, it explores issues and experiences in the creation of manuals, identifies research issues related to the use and evaluation of manuals, and addresses training as a context for the application of treatment manuals. Key areas of coverage include: Reports of experiences with major, internationally established manuals, formulations of innovative practices by their developers, and specifications of training programs. Discussion of the various formats of manuals, demonstrating their benefit and transportability across different contexts. Surveys of a broad selection of manuals, creating a flexible and diversified concept of what forms manuals may take. Essential guidance for using manuals, which is an indispensable step for the field to progress and to claim to health resource commissioning, governments and insurance agencies that the systemic practice is evidence based and effective. The Handbook of Systemic Approaches to Psychotherapy Manuals is an essential resource for researchers, professors, and graduate students as well as clinicians and related therapists and professionals in clinical psychology, family studies, public health, social work, psychotherapy, child and adolescent psychology and all interrelated disciplines.

Ergonomics aims to design appliances, technical systems and tasks in such a way as to improve human safety, health, comfort and performance. It developed into a recognized field during the Second World War, when for the first time, technology and the human sciences were systematically applied in a coordinated manner.

Physiologists, psychologists, anthropologists, medical doctors, work scientists and engineers, together addressed the problems arising from the operation of complex military equipment. Because of the 'applied' nature of ergonomics there are many outstanding pieces of work that have never been published in the archival literature, since they were written for contract work by commercial or governmental laboratories. These volumes collect some of those papers that have attained classical status, yet are naturally difficult to obtain, making *Ergonomics: Major Writings* a unique and valuable collection. Volume 1 begins with papers setting the historical context of ergonomics, and also includes several classical papers that indicate the scope and range of the discipline. It also examines methodological issues, subjective scales and their uses and task analysis. Volume 2 looks at skilled behaviour, displays and workload. Volume 3 examines psychological mechanism and models. Volume 4 deals with all facets of the engineering branch of ergonomics including; control theory, press control and manufacturing, and automation.
