In this exciting new history of Dodge and Ram trucks, award-winning automotive author Patrick Foster details the genesis of today's hot-selling Ram pickups, vans and four-wheel-drives. Beginning with the Graham Brothers, who built the first trucks sold through Dodge dealers, Foster traces the path of Dodge commercial vehicles through the terrific Dodge trucks built during the Roaring Twenties and into the

Depression Thirties. Foster then takes us into the war years, 1941-1945, when Dodge manufactured a broad array of war materiel including the mighty WD and WF trucks, which later morphed into the now-legendary postwar Dodge Power Wagons. Next, Foster dives into the decade of the fabulous 1950s, a golden era for American pickups that brought us the equally fabulous Dodge B and C series trucks. Entering the 1960s, Foster tells the story of the growing popularity of Dodge trucks. The story grows as the Dodge line expands in size and in sales. The Dodge D-series and four-wheel-drive W-series are covered in a following chapter, while another is dedicated to the Dodge cabover trucks. The book ends with an Addendum dedicated to the delightful Dodge cabovers. The final chapter of Dodge and Ram Pickups: An Illustrated History covers the turbulent years 2000-2020 when Dodge went from being part of a bankrupt company to its present position today as the number 2 selling full-size pickup in the world.

Medium- and heavy-duty trucks, motor coaches, and transit buses - collectively, "medium- and heavy-duty vehicles", or MHDVs - are used in every sector of the economy. The fuel consumption and greenhouse gas emissions of MHDVs have become a focus of legislative and regulatory action in the past few years. This study is a follow-on to the National Research Council's 2010 report, Technologies and Approaches to Reducing the Fuel Consumption of Medium-and Heavy-Duty Vehicles. That report provided a series of findings and recommendations on the development of regulations for reducing fuel consumption of MHDVs. On September 15, 2011, NHTSA and EPA finalized joint Phase I rules to establish a comprehensive Heavy-Duty National Program to reduce greenhouse gas emissions and fuel consumption for on-road medium- and heavy-duty vehicles. As NHTSA and EPA began

working on a second round of standards, the National Academies issued another report, *Reducing the Fuel Consumption and Greenhouse Gas Emissions of Medium- and Heavy-Duty Vehicles, Phase Two: First Report*, providing recommendations for the Phase II standards. This third and final report focuses on a possible third phase of regulations to be promulgated by these agencies in the next decade.

The Viper stunned Americans by showing that Dodge, whose cars were all front-wheel drive (and mostly powered by four-cylinder engines), could make a raw, brutal, V10-powered car that could run with the best. Team Viper went a step further at Le Mans, proving that an American car could handle turns, too; so well that it won its class, repeatedly, at a fraction of the cost of the cars it beat. This book covers the transition from a concept to a rough and brutal rocket to a world-class supercar, and includes every generation. The story also tells of the rough times when the entire Viper business could have been sold to the highest bidder, and considers alternative paths the 2013-17 Viper might have taken. This is not just a gushing tribute to the Dodge Viper, the author provides an objective view of the full story, using business, historical, and enthusiast perspectives. The book looks at the business case for each generation, the development stories and their outcomes, and describes some of the issues owners may have to watch out for, particularly in the early models.
