A two-man undercover team working for U.S. Customs to disrupt drug smuggling across the Mexican border is missing. The school teacher brother of one missing team member finds their safe house and learns about their mission and the high tech electronics and weapons they use. Since he knows nothing about how spooks operate, the teacher hires a Native American Viet Nam veteran to help him track down the men.

Together, the two amateurs slip into drug cartel territory and begin their search for the covert team, or their bodies. Before long, the amateurs discover the missing team is in jail. However, they donat know they were betrayed by a U.S. Customs official who is dirty with drug money payoff. Recruiting some locals, the amateurs formulate a plan to break the team out of jail, not realizing their movements are being monitored by the highest U.S. espionage bureau, the NSA.

The legacy of Alexander von Humboldt (1769–1859) looms large over the natural sciences. His 1799–1804

research expedition to Central and South America with botanist Aimé Bonpland set the course for the great scientific surveys of the nineteenth century, and inspired such essayists and artists as Emerson, Goethe, Thoreau, Poe, and Church. The chronicles of the expedition were published in Paris after Humboldt's return, and first among them was the 1807 "Essay on the Geography of Plants." Among the most cited writings in natural history, after the works of Darwin and Wallace, this work appears here for the first time in a complete English-language translation. Covering far more than its title implies, it represents the first articulation of an integrative "science of the earth," encompassing most of today's environmental sciences. Ecologist Stephen T. Jackson introduces the treatise and explains its enduring significance two centuries after its publication. *Essay on the Geography of Plants*
