Commercial Fisheries Review Houghton Mifflin Harcourt

The Regulus missile was a direct outgrowth of World War II. The success of Germany's V-1 buzz bombs and the awesome power of the a-bomb suggested that developing a submarine-launched, nuclear-armed guided missile was an imperative. The Chance-Vought Aircraft Company won the contract for Regulus with a bold proposal. Their missile resembled a pilotless jet aircraft, and during the test phase was equipped with landing gear, allowing the missile to be recovered rather than expended during the tests. Regulus would be radio controlled, either by a chase aircraft or by a nearby ship or submarine, and it could carry a nuclear payload. JATO boosters enabled submarine launch of the Regulus. It would be deployed aboard five submarines. They conducted the nation's first nuclear deterrent patrols off the coast of the Soviet Union in 1959-1964. Originally printed by the U.S. Navy and Chance-Vought, this handbook was restricted. It was declassified and is here reprinted in book form.

Ships operating in the Arctic
and Antarctic environments are
exposed to a number of unique
risks. Poor weather conditions
and the relative lack of good
charts, communication systems
and other navigational aids
pose challenges for mariners.
The remoteness of the areas
makes rescue or clean-up
operations difficult and
costly. Cold temperatures may
reduce the effectiveness of
numerous components of the
ship, ranging from deck
machinery and emergency
equipment to sea suction. When
ice is present, it can impose
additional loads on the hull,
propulsion system and
appendages. The Guidelines for
ships operating in polar waters
aim at mitigating the
additional risk imposed on
shipping in the harsh
environmental and climatic
conditions that exist in polar
waters. This publication should
be of interest to maritime
administrations, ship
manufacturers, shipping
companies, cruise and tour
operators, education institutes
and others concerned with the
safe operation of ships in
polar waters.

A satirical novel on the death of God. For inexplicable reasons he dies and falls into the sea, and the Vatican hires a supertanker to secretly tow his two-mile-long body to the Arctic for preservation. But the secret leaks out and everyone gets in on the act, exploiting God's death to their own end.

This book, I have written, has helped to release all the tension I had with the obstacles I met along with the raising of this family. With the farm life and the large family, including a son with birth defects and Down's syndrome, life was strenuous. Years of struggling to keep the family well and happy. With the help of good doctors and surgeons, in Bobby's case, we have seen that it can be done. I was always trusting God in each incidence. It is my hope that this book will prove to be an inspiration to any and all who have the privilege of reading it.
