This book is focused on the importance of detecting people's motivation, how they make decisions and the way the actions they take is rapidly increasing with the progress of IoT and the Connected Society. It explores how emotion-related processes are increasing in importance rapidly. The contributors move through a variety of related topics, all aimed at revealing how humans and things must increasingly interact. It indicates how strategy becomes increasingly important, particularly creating the best adaptable strategy to respond to the quickly and extensively changing situations. With engineering quickly

moving from product development to experience development, and the role of emotion in engineering becoming increasingly apparent, this book offers a timely and valuable resource for engineers and researchers alike.

Lean Thinking was launched in the fall of 1996, just in time for the recession of 1997. It told the story of how American, European, and Japanese firms applied a simple set of principles called 'lean thinking' to survive the recession of 1991 and grow steadily in sales and profits through 1996. Even though the recession of 1997 never happened, companies were starving for information on how to make themselves leaner and more efficient. Now we are dealing with the recession of 2001 and the financial meltdown of 2002. So what happened to the exemplar firms profiled in Lean Thinking? In the new fully revised edition of this bestselling book those pioneering lean thinkers are brought up to date. Authors James Womack and

Daniel Jones offer new guidelines for lean thinking firms and bring their groundbreaking practices to a brand new generation of companies that are looking to stay one step ahead of the competition.

This book aims to show that fuzzy set theory constitutes a highly expressive framework for modeling preference queries. It presents a study of the algorithmic aspects related to the evaluation of such queries in order to demonstrate that this framework offers a good trade-off between expressivity and efficiency. Numerous examples and proofs are liberally and lucidly

demonstrated throughout, and greatly enhance the detailed theoretical aspects explored in the book.

The Automobile and the Environment gathers a selection of papers presented by researchers and engineers from academic institutions and the automotive industry at the International Congress for Automotive and Transport Engineering CONAT 2010, organized by the Transylvania University of Braşov in Romania, SIAR (The Society of Automotive Engineers from Romania) and SAE International, under the patronage of FISITA (The International Federation of Automotive Engineering Societies) and EAEC (European Automobile Engineers Cooperation). The book contains four parts: 1. Automotive Powertrains 2. Alternative Fuels 3. Vehicle Dynamics and Vehicle Systems Design 4. Transport, Traffic and Safety By studying this book, engineers will be given the opportunity to evaluate the new visions and concepts being applied in the modern automotive

industry, and also the chance to identify themes for future studies in the context of sustainable development, the use of alternative energy, reorganisation of industry strategies, and the increase in competitiveness through innovation.
