Advanced Placement Economics W. Norton & Company
"The Mediterranean in the Age of Globalization is a welcome corrective to the tendency to present globalization as a homogenous concept, and the failure to describe how it operates in specific regions. Ribas-Mateos examines globalization and migration across the Mediterranean, using an innovative, integrated framework so as to map social places by describing how social, political, cultural, and economic forces are embedded within a globalizing environment. The author articulates an original and compelling narrative, mapping the Mediterranean as a global place where international and regional forces are intertwined in multiple threads. In doing so, she identifies two key components of globalization--affecting specifically forms of welfare and issues of mobility--in the context of a weakening European welfare state and the relocation and reinforcement of Mediterranean borders. Nine Mediterranean cities are investigated as "gateway" cities, which shape two major effects of globalization: welfare and mobility. The book challenges conventional North-South perspectives, and focuses and systematizes the way international migration should be conceptualized. The originality of the book results from the author's fieldwork, which is rich in descriptive detail, and from a theory centered around global perspectives. Seven case studies in Southern Europe--Algeciras, Athens, Barcelona, Lisbon, Naples,

Turin, and Thrace--deal with issues related to migration and the welfare state. She also includes two ethnographies that represent two Mediterranean gateways in the North-South Mediterranean division: Tangiers (in Morocco) and Durres (in Albania), which are mapped as border-cities in the global Mediterranean context. Because of its intrinsically multidisciplinary nature, this superb volume will be of particular interest to academics and social science researchers as well as policymakers and international agencies."

5 Steps to a 5 AP Macroeconomics, 2014-2015 Edition McGraw Hill Professional

The substantially revised fourth edition of a widely used text, offering both an introduction to recursive methods and advanced material, mixing tools and sample applications. Recursive methods provide powerful ways to pose and solve problems in dynamic macroeconomics. Recursive Macroeconomic Theory offers both an introduction to recursive methods and more advanced material. Only practice in solving diverse problems fully conveys the advantages of the recursive approach, so the book provides many applications. This fourth edition features two new chapters and substantial revisions to other chapters that demonstrate the power of recursive methods. One new chapter applies the recursive approach to Ramsey taxation and sharply characterizes the time inconsistency of optimal policies. These insights are used in other chapters to simplify recursive formulations of Ramsey plans and credible government policies. The second new chapter explores the mechanics of matching

models and identifies a common channel through which productivity shocks are magnified across a variety of matching models. Other chapters have been extended and refined. For example, there is new material on heterogeneous beliefs in both complete and incomplete markets models; and there is a deeper account of forces that shape aggregate labor supply elasticities in lifecycle models. The book is suitable for first- and second-year graduate courses in macroeconomics. Most chapters conclude with exercises; many exercises and examples use Matlab or Python computer programming languages.
