This completely revised and updated text, now in its Third Edition, continues to explain the underlying concepts of product management. In the process, the book equips the budding as well as the practising managers with sufficient knowledge about how to deal with different problems faced in managing any typical fast moving consumer good or durable product.

Divided into three parts, the book provides, in Part I, a macro perspective of the Indian market. Part II offers an analytical discussion interspersed with vivid illustrations on conceptual issues like branding, segmentation, positioning and differentiation. Part III features several new products; it also provides latest information on the products presented in the earlier edition. In addition, it analyzes the current market situation prevailing for a particular product in India. Finally, here, each chapter shows how leading companies are successfully marketing the particular product in the Indian market. WHAT IS NEW IN THIS EDITION : The new edition incorporates the

challenges offered by many new trends like growth of modern trade, explosion of the media, and the increasing influence of rural market in India. Chapters on The Indian Market: Emerging Panorama, and New Marketing Challenges expose the students to contemporary concepts and examples. Part III offers new chapters on market analysis on products such as Tea, Soft Drinks, Chocolates, Malted Beverages, Packaged Drinking Water, Tooth-Paste, Detergents, Fairness Cream, Footwear, Mobile Phones, and Digital Camera. Besides, it gives up-to-date background information for other products covered in the earlier edition. The Student CD contains a set of PowerPoint Presentations (PPTs) of 20 products. This well-established study has been widely adopted as a textbook in MBA programmes across the country. The Third Edition is more profusely illustrated with exhibits, diagrams and PPTs, and should be of immense utility and worth to the students of management as well as practising brand managers and executives in the advertising arena.

The Consumer Response to Gasoline Price Changes Vandenhoeck & Ruprecht

When gasoline prices rise, people notice: the news is filled with reports of pinched household budgets and politicians feeling pressure to do something to ameliorate the burden. Yet, raising the gasoline tax to internalize externalities is widely considered by economists to be among the most economic efficiency-improving policies we could implement in the transportation sector. This dissertation brings new

evidence to bear on quantifying the responsiveness to changing gasoline prices, both on the intensive margin (i.e., how much to drive) and the extensive margin (i.e., what vehicles to buy). I assemble a unique and extremely rich vehicle-level dataset that includes all new vehicle registrations in California 2001 to 2009, and all of the mandatory smog check program odometer readings for 2002 to 2009. The full dataset exceeds 49 million observations. Using this dataset, I quantify the responsiveness to gasoline price changes on both margins, as well as the heterogeneity in the responsiveness. I develop a novel structural model of vehicle choice and subsequent utilization, where consumer decisions are modeled in a dynamic setting that explicitly accounts for selection on unobserved driving preference at both the time of purchase and the time of driving. This utility-consistent model allows for the analysis of the welfare implications to consumers and government of a variety of different policies, including gasoline taxes and feebates. I find that consumers are responsive to changing gasoline prices in both vehicle choice and driving decisions, with more responsiveness

than in many recent studies in the literature. I estimate a medium-run (i.e., roughly two-year) elasticity of fuel economy with respect to the price of gasoline for new vehicles around 0.1 for California, a response that varies by whether the vehicle manufacturer faces a tightly binding fuel economy standard. I estimate a medium-run elasticity of driving with respect to the price of gasoline around -0.15 for new personal vehicles in the first six years. Older vehicles are driven much less, but tend to be more responsive, with an elasticity of roughly -0.3. I find that the vehicle-level responsiveness in driving to gasoline price changes varies by vehicle class, income, geographic, and demographic groups. I also find that not including controls for economic conditions and not accounting for selection into different types of new vehicles based on unobserved driving preference tend to bias the elasticity of driving away from zero -- implying a greater responsiveness than the true responsiveness. This is an important methodological point, for much of the literature estimating similar elasticities ignores these two issues. These results have

significant policy implications for policies to reduce gasoline consumption and greenhouse gas emissions from transportation. The relatively inelastic estimated responsiveness on both margins suggests that a gasoline tax policy may not lead to dramatic reductions in carbon dioxide emissions, but is a relatively non-distortionary policy instrument to raise revenue. When the externalities of driving are considered, an increased gasoline tax may not only be relatively non-distortionary, but even economic efficiency-improving. However, I find that the welfare changes from an increased gasoline tax vary significantly across counties in California, an important consideration for the political feasibility of the policy. Finally, I find suggestive evidence that the 'rebound effect' of a policy that works only on the extensive margin, such as a feebate or CAFE standards, may be closer to zero than the elasticity of driving with respect to the price of gasoline. This suggestive finding is particularly important for the analysis of the welfare effects of any policy that focuses entirely on the extensive margin.

UN RETOUR À LA NORMALE (ENFIN PRESQUE) L'Annuel
de l'automobile célèbre sa 21e saison sur le
marché. La majorité est atteinte. Après une
année de COVID, la planète automobile traverse
une année de pénurie de puces électroniques qui
affecte le monde entier. Pour bien des
constructeurs, le rythme est au ralenti depuis
des mois et même des constructeurs qui avaient
été jusqu'ici épargnés par la crise ont
maintenant de la difficulté. Un cabinet-conseil

américain évalue les pertes mondiales à plus de 130 milliards de dollars et cette disette de puces électroniques va se poursuivre pour le reste de 2021. Mais cela n'a pas ralenti les constructeurs automobiles qui continuent de mettre de l'avant les plans d'électrification. De nouveaux joueurs comme Lucid, Rivian, Bollinger et Karma s'ajoutent aux pages du livre cette année. LES TENDANCES ACTUELLES Pour suivre les courants les plus forts, L'Annuel de l'automobile offre des reportages exclusifs. Vous retrouverez cette année : L'électrique regarde dans le rétro Renault 5, Volkswagen Microbus, Hummer. Tous ces véhicules et d'autres multiplient les clins d'œil au passé pour mieux « vendre » la conversion à l'électrique. Vous avez même des compagnies qui font la conversion de véhicules classiques en modèle électrique. Le rouage intégral pour les nuls Rouage intégral, 4 roues motrices, prise constante, et maintenant les modèles 4 roues motrices électriques. Notre chroniqueur automobile Michel Crépault résume en termes simples tout ce qui concerne les modèles 4 roues motrices. La collection de voitures de José Gaudet Grand amateur de voitures, José Gaudet aime les voitures de toutes les époques pour peu qu'elles procurent un sentiment dynamique au volant. Il nous présente sa collection avec ses commentaires colorés pour chaque modèle. Sommes-nous dépassés par la

technologie? L'électronique règne maintenant sans partage dans les véhicules modernes. Est-ce que la courbe d'apprentissage des automobilistes suit la vitesse de développement des constructeurs? Suivez Alain McKenna qui vous dira comment c'est possible (ou non) d'appriivoiser cette technologie.

Essential resource for the fight against emerging infectious diseases Incidences such as the 2014 Ebola epidemic in West Africa and the 2015 appearance of Zika in Brazil provide dramatic evidence of the continued ability of microbes to emerge, spread, adapt, and threaten global health. The challenge facing infectious disease specialists and public health professionals is to improve and find new diagnostic, therapeutic, and prevention strategies. The editors of the 10th installment of the Emerging Infections series have compiled the perspectives of leading infectious disease experts into 22 chapters that provide important updates on a broad range of emerging and reemerging bacterial, viral, parasitic, and fungal infectious diseases in the United States and globally. In addition to

focusing on MERS, Ebola virus disease, chikungunya, and Zika virus disease, *Emerging Infections 10* explores the global threat of antimicrobial resistance in reviews on carbapenem-resistant Enterobacteriaceae, multiply-resistant gonococcal infections, non-typhoidal Salmonella infections, and artemisinin-resistant Plasmodium falciparum malaria. Topics include both recently- and long-recognized diseases that pose challenges for the clinical, laboratory, research, public health, and animal health communities. *Emerging Infections 10* presents new and emerging strategies to prevent, control, and eradicate infectious diseases and guides readers to the primary literature where they can explore individual topics in greater depth. This book is a valuable reference for professionals in microbiology, epidemiology, public health, and clinical and veterinary medicine.
