Imagine an America where politicians, governmental institutions, schools, new technologies, and interest groups work together to promote informed, engaged citizens. Civic Education in the Twenty-First Century brings together scholars from various disciplines to show how such a United States is possible today. Inspired by Alexis de Tocqueville's analysis of American democracy in the early 1800s, this edited volume represents a multidimensional evaluation of civic education in its new and varied forms. While some lament a civics crisis in America today, Civic Education in the Twenty-First Century raises hope that we can have an informed and active citizenry. We find the activities of a number of politicians, government institutions, schools and interest groups as promising developments in the struggle to educate and engage Americans in their democracy. New technologies and new innovations in civic education have laid the foundation for a revitalized American civic ecology. With Civic Education in the Twenty-First Century, we call for the United States to make these practices less isolated and more common throughout the county. The volume is broken into three major sections. First there are four chapters exploring the history and philosophical debates about civic education, particularly with respect to its role in America's educational institutions. Then, the second section provides seven groundbreaking inquiries into how politicians and political institutions can promote civic education and engagement through their routine operations. As some examples, this section explores how politicians through

campaigns and judiciaries through community programs enhance civic knowledge and encourage civic engagement. This section also explores how new technologies like the Internet and social media are increasingly used by government institutions and other entities to encourage a more politically informed and engaged citizenry. Finally, the third section contains six chapters that explore programs and practices in higher education that are enhancing civic education, engagement and our knowledge of them. From the virtual civics campus of Fort Hayes State to citizens' academies throughout the country, this section shows the possibilities for schools today to once again be civics actors and promoters.

Technical Abstract Bulletin Cherry Lake
Higher education in the United States and elsewhere is being forced to respond to several disparate social and economic pressures: social trust and connectedness is down, empathy across citizens is deteriorating, political awareness and participation are low, and job prospects and financial security are sobering for many citizens, even the college educated. The response to these pressures is not to double down on one mission of higher education, namely job creation. Instead, higher education marching into the next decades requires an integrative approach that promotes job creation, skill development, citizen cultivation, and knowledge dissemination—all oriented towards strengthening communities and providing opportunity for all citizens to pursue the good life. Across eight chapters, this book provides historical and theoretical analyses of the role of higher education in society across these four missions, as well as applied mini and extended case examples demonstrating how the four missions can be successfully integrated. The extended cases consist of one pedagogy example, a teaching initiative labeled "joined up service learning" that represents deep partnership between the university and community, and an

institutional design case of an academic research center and its work conducted in partnership with community stakeholders. Recommendations are advanced for an integrated approach to performance funding of higher education institutions, tenure and promotion expectations for faculty, and graduation requirements for students, among others. **America, the Owner's Manual** Transportation Research Board

In 2016, Americans fed up with the political process vented that frustration with their votes. Republicans nominated for president a wealthy businessman and former reality show host best known on the campaign trail for his sharp rhetoric against immigration and foreign trade. Democrats nearly selected a self-described socialist who ran on a populist platform against the influence of big money in politics. While it is not surprising that Americans would channel their frustrations into votes for contenders who pledge to end business as usual, the truth is that we don't have to pin our hopes for greater participation on any one candidate. All of us have a say—if we learn, master and practice the skills of effective citizenship. One of the biggest roadblocks to participation in democracy is the perception that privileged citizens and special interests command the levers of

power and that everyday Americans can't fight City Hall. That perception is undoubtedly why a 2015 Pew Charitable Trusts survey found that 74 percent of those Americans surveyed believed that most elected officials didn't care what people like them thought. Graham and Hand intend to change that conventional wisdom by showing citizens how to flex their citizenship muscles. They describe effective citizenship skills and provide tips from civic experts. Even more importantly, they offer numerous examples of everyday Americans who have used their skills to make democracy respond. The reader will see themselves in these examples of citizens who chose to be victorious participants rather than tranquil spectators in the arena of democracy. By the end of the book, you will have new confidence that citizen participation is the lifeblood of America -- and will be ready to make governments work for you, not the other way around.

The Honda K-Series engine was introduced in 2001, replacing the B-Series as the engine of choice for Honda enthusiasts. These new K-Series engines are the most powerful stock Honda/Acura engines you can get. They featured new technology such as a roller rocker valvetrain, better flowing heads, and advanced variable cam timing technology that made these engines suddenly the thing to have. And

that's where the engine swappers come in. In *Honda K-Series Engine Swaps*, author Aaron Bonk guides you through all the details, facts, and figures you will need to complete a successful K-Series swap into your older chassis. All the different engine variants are covered, as well as interchangeability, compatibility, which accessories work, wiring and controls operation, drivetrain considerations, and more. There is a wealth of research and literature explaining suburban sprawl and the urgent need to retrofit suburbia. However, until now there has been no single guide that directly explains how to repair typical sprawl elements. The *Sprawl Repair Manual* demonstrates a step-by-step design process for the re-balancing and re-urbanization of suburbia into more sustainable, economical, energy- and resource-efficient patterns, from the region and the community to the block and the individual building. As Galina Tachieva asserts in this exceptionally useful book,

sprawl repair will require a proactive and aggressive approach, focused on design, regulation and incentives. The *Sprawl Repair Manual* is a much-needed, single-volume reference for fixing sprawl, incorporating changes into the regulatory system, and implementing repairs through incentives and permitting strategies. This manual specifies the expertise that's needed and details the techniques and algorithms of sprawl repair within the context of reducing the financial and ecological footprint of urban growth. The *Sprawl Repair Manual* draws on more than two decades of practical experience in the field of repairing and building communities to analyze the current pattern of sprawl development, disassemble it into its elemental components, and present a process for transforming them into human-scale, sustainable elements. The techniques are illustrated both two- and three-dimensionally, providing users with clear methodologies for the sprawl repair interventions, some of which are radical, but all of which will produce positive results.
