This manual is a printed edition of the official Org Mode 9.2 Reference Manual - release 9.2. A free PDF copy may be found at orgmode.org. Org is a mode for keeping notes, maintaining TODO lists, and project planning with a fast and effective plain-text system. It also is an authoring system with unique support for literate programming and reproducible research. Org is implemented on top of Outline mode, which makes it possible to keep the content of large files well structured. Visibility cycling and structure editing help to work with the tree. Tables are easily created with a built-in table editor. Plain text URL-like links connect to websites, emails, Usenet messages, BBDB entries, and any files related to the projects. Org develops organizational tasks around notes files that contain lists or information about projects as plain text. Project planning and task management makes use of metadata which is part of an outline node. Based on this data, specific entries can be extracted in queries and create dynamic agenda views that also integrate the Emacs calendar and diary. Org can be used to implement many different project planning schemes, such as David Allen's GTD system.

EDWIN TURNER AND RACHEL WEBSTER Co-Chairs, Scientific Organizing Committee IAU Symposium 173, Astrophysical Applications of Gravitational Lenses, was held in Melbourne, Australia from July 9-14, 1995. The Symposium was sponsored by IAU Commissions 47 and 40. With the discovery by Walsh and collaborators of the first instance of a gravitational lens, the multiply imaged quasar 0957+561, the area of gravitational lensing moved from speculative theory to a major astrophysical tool. Since that time, there have been regular, approximately biennial international meetings both in Europe and in North America, which have specifically focussed on gravitational lensing. On this occasion, with the blessing of the IAU, the meeting was held at the University of Melbourne in Australia. It was the first international astronomical meeting to be held at the University of Melbourne, and hope fully has given the astronomical community some enthusiasm for trekking half-way round the globe to Australia to discuss their latest work.

This volume helps take some of the "mystery" out of identifying and dealing with key algorithms. Drawing heavily on the author's own real-world experiences, the book stresses design and analysis. Coverage is divided into two parts, the first being a general guide to techniques for the design and analysis of computer algorithms. The second is a reference section, which includes a catalog of the 75 most important algorithmic problems. By browsing this catalog, readers can quickly identify what the problem they have encountered is called, what is known about it, and how they should proceed if they need to solve it. This book is ideal for the working professional who uses algorithms on a daily basis and has need for a handy reference. This work can also readily be used in an upper-division course or as a student reference guide. THE ALGORITHM DESIGN MANUAL comes with a CD-ROM that contains: * a complete hypertext version of the full printed book. * the source code and URLs for all cited implementations. * over 30 hours of audio lectures on the design and analysis of algorithms are provided, all keyed to on-line lecture notes.

"The Federation of Animal Science Societies (FASS) has released the third edition of the Guide for the Care and Use of Agricultural Animals in Research and Teaching (FASS Ag Guide). The first edition was published in 1988, and the first revised edition was published in 1999. The FASS Ag Guide serves as a primary reference document for meeting the needs and requirements of agricultural animals utilized in research and teaching. This third edition differs from the past editions in several meaningful ways. The full name of the FASS Ag Guide has changed. Previous editions were titled the Guide for the Care and Use of Agricultural Animals in Agricultural Research and Teaching. The new edition drops the second use of the word agricultural in the title. Chapters have been added to address species handling and transportation and environmental enrichment strategies. The authors of the third edition included experts in each species and in animal care and use, including animal scientists, veterinarians, teachers, and engineers; all were chosen for their prominence in the many fields of the animal sciences so that the best available science could be applied to this revision" -- FASS website.

The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.
