the Methods of Performing the Work

on All the Different Mechanical Parts

of the Car HE business of repairing

Fords has come to be such an

enormous one and T open to such

competition that the man who expects

to make a success of it is forced to

use the most up-to-the-minute

methods, tools and machinery available

for the purpose. This book is designed

to give in a clear, concise and thorough

way all the detail operations in

repairing and overhauling the Ford

mechanical units using the best and

quickest methods and employing the

tools and machinery that will save time

and labor and insure jobs as nearly

perfect as it is possible to get out.

Service work on all makes of cars is

slowly but surely turning toward fac

tory production methods and this is

more true of Ford' service than of any

other car. Repairmen are realizing that to produce service in quantity and at a low figure it is of vital importance to specialize and to use special tools and equipment. The all around mechanic is rapidly giving way to the motor man or the rear assembly man. When a man specializes on one job, he becomes more proficient, does the job quicker and also does it better.
