A former judge with a passion for history, Jean Sénat Fleury was born in Haiti and currently lives in Boston. He wrote several historical books, such as: *The Stamp Trial*, *Jean-Jacques Dessalines: Words from Beyond the Grave*, *Toussaint Louverture: The Trial of the Slave Trafficking*, *Adolf Hitler: Trial in Absentia in Nuremberg*, *The Trial of Osama Bin Laden*, *Hirohito Guilty or Innocent: The Trial of the Emperor*. His new book, *Japan's Empire Disaster*, provides an understanding of the expansionist policy practiced by Japan during the end of the nineteenth and the first period of the twentieth century. From the adoption of the Meiji constitution in 1889 and the first period of the Shōwa era (1927-1945), the military controlled the Japanese constitutional government. The result was years of political instability, more internal conflicts, violence, murders, assassinations, overseas aggression, and war crimes. The book demonstrates that in Japan, during the Pacific War, the real driving force of the war was the Imperial Japanese Army and the Imperial Japanese Navy. Hirohito, as supreme commander, gave full support to the army and navy. On multiple occasions, he sanctioned many government policies. In fact, he was responsible for the atrocities that the Japanese troops committed in Asia during the Pacific War. *Japan's Empire Disaster* is a book of information and training. The book describes Japan's opening to modernization with the 1853 arrival of commodore Matthew Calbraith Perry in the country, and also details the history of the wars launched by Emperor Meiji and Emperor Hirohito to build Japan's empire in the nineteenth and the twentieth centuries.

Industriële films worden gezien als een apart filmgenre van de twintigste eeuw. Ze werden geproduceerd en gesponsord door de overheid en grote bedrijven en moesten vooral aan de wensen van de sponsors voldoen, en niet zo zeer aan die van de filmmakers. In de hoogtijdagen werkten er duizenden mensen aan deze industriële films. Zo zijn er vakbladen en filmfestivals ontstaan door samenwerking met grote bedrijven als Shell en AT & T. Daarnaast hebben belangrijke regisseurs, zoals Buster Keaton, John Grierson en Alain Resnais, aan deze films meegewerkt. Toch lijkt de industriële film geen spoor te hebben achtergelaten in het filmsche culturele discours. Films that Work is het eerste boek waarin de industriële film en zijn opmerkelijke geschiedenis worden onderzocht.

Originally published in 1994, this book considers one of the enduring themes of social science. How is a national identity forged and sustained? How does it change over time? Who is included in the body politic and who is socially excluded? How do the established population, opinion-makers and politicians react to more marginal people, including long-spurned minorities and recent migrants? This original analysis shows how the British as a people are constantly defined and redefined through their interactions with several ‘frontiers of identity’, namely Celts, expatriates, Americans, Europeans, citizens of the Commonwealth and more crucially with ‘aliens’. The alien-British relationship is particularly loaded with uneasiness, aversion and hostility. ‘Aliens’ a category created by what the author calls ‘the frontier guards’ of British identity, are frequently deported or detained. Their sanctuaries are invaded, their legal and humanitarian claims for asylum minutely examined and often denied. This searching exploration of these processes shows how the meaning of who one is depends crucially on who one rejects. Drawing on a wealth of historical scholarship, research compiled at the time of the original publication and contemporary social theory and now reissued with a new Preface this book exposes the unstated assumptions and hidden meanings in the relationship between the ‘British’ and ‘the others’. It uncovers how the British and their rulers seek to reshape their national identity in a difficult period of post-imperial adjustment, relative economic decline and the European integration of the 1990s. The book will be of use to students of sociology, politics, history and European studies.

From biometrics to predictive policing, contemporary security relies on sophisticated scientific evidence-gathering and knowledge-making focused on the human body. Bringing together new anthropological perspectives on the complexities of security in the present moment, the contributors to *Bodies as Evidence* reveal how bodies have become critical sources of evidence that is organized and deployed to classify, recognize, and manage human life. Through global case studies that explore biometric identification, border control, forensics, predictive policing, and counterterrorism, the contributors show how security discourses and practices that target the body contribute to new configurations of knowledge and power. At the same time, margins of error, unreliable technologies, and a growing suspicion of scientific evidence in a “post-truth” era contribute to growing insecurity, especially among marginalized populations. The Megalithic European

From the visionary bestselling author of *The Second World and How to Run the World* comes a bracing and authoritative guide to a future shaped less by national borders than by global supply chains, a world in which the most connected powers—and people—will win. Connectivity is the most revolutionary force of the twenty-first century. Mankind is reengineering the planet, investing up to ten trillion dollars per year in transportation, energy, and communications infrastructure linking the world’s burgeoning megacities together. This has profound consequences for geopolitics, economics, demographics, the environment, and social identity. Connectivity, not geography, is our destiny. In *Connectography*, visionary strategist Parag Khanna travels from Ukraine to Iran, Mongolia to North Korea, Pakistan to Nigeria, and across the Arctic Circle and the South China Sea to explain the rapid and unprecedented changes affecting every part of the planet. He shows how militaries are deployed to protect supply chains as much as borders, and how nations are less at war over territory than engaged in tugs-of-war over pipelines, railways, shipping lanes, and Internet cables. The new arms race is to connect to the most markets—a race China is now winning, having launched a wave of infrastructure investments to unite Eurasia around its new Silk Roads. The United States can only regain ground by fusing with its neighbors into a super-continental North American Union of shared resources and prosperity. *Connectography* offers a unique and hopeful vision for the future. Khanna argues that new energy discoveries and technologies have eliminated the need for resource wars; ambitious transport corridors and power grids are unscrambling Africa’s fraught colonial borders; even the Arab world is evolving a more peaceful map as it builds resource and trade routes across its war-torn landscape. At the same time, thriving hubs such as Singapore and Dubai are injecting dynamism into young and heavily populated regions, cyber-communities empower commerce across vast distances, and the world’s ballooning financial assets are being wisely invested into building an inclusive global society. Beneath the chaos of a world that appears to be falling apart is a new foundation of connectivity pulling it together. Praise for *Connectography* “Incredible . . . With the world rapidly changing and urbanizing, [Khanna’s] proposals might be the best way to confront a radically different future.” —The Washington Post “Clear and coherent . . . a well-researched account of how companies are weaving ever more complicated supply chains that pull the world together even as they squeeze out inefficiencies. . . . [He] has succeeded in demonstrating that the forces of globalization are winning.” —Adrian Woolridge, *The Wall Street Journal* “Bold . . . With an eye for vivid details, Khanna has . . . produced an engaging geopolitical travelogue.” —Foreign Affairs “For those who fear that the world is becoming too inward-looking, *Connectography* is a refreshing, optimistic vision.” —The Economist “Connectivity has become a basic human right, and gives everyone on the planet the

opportunity to provide for their family and contribute to our shared future. *Connectography* charts the future of this connected world.” —Marc Andreessen, general partner, Andreessen Horowitz “Khanna’s scholarship and foresight are world-class. A must-read for the next president.” —Chuck Hagel, former U.S. secretary of defense
