The soft crash of waves that blissfully block out all other noise, the smell of two-stroke and lawn clippings, the first sip of cold beer, the laboured whir of the ceiling fan, the sound of a bag of ice hitting the pavement, that feeling of salt on skin and even the smell of prawns on bin night. Comedian Tim Ross uses the Australian Summer as a back drop for a new collection of nostalgic short stories.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

Do you know how we got to here? In "Spinning World History," Eric Burnett takes you through all the major tales, traditions and turning points of world history - not just European history, but WORLD history. You'll figure out real quick that the West might have had some crowning moments, but for the whole of human history, it's been the Persians, the Indians, the Chinese, the Muslims or some horse peoples from the steppe that have truly turned us into the clever little creatures we are today. And when most world history books fade off once the Cold War comes to a close, this sometimes cheekily-written tome just gets going. Updated to include contemporary debates over topics such as Brexit, the rise of ISIS, claims to the South China Sea, the mounting refugee crisis and the controversial presidency of Donald Trump, this second edition finishes with a distinctively comprehensive look at the 21st century challenges facing the nine major regions of today's world - Africa, Latin America, Japan, China, the Middle East, India, Russia, Europe and the United States.

From biometrics to predictive policing, contemporary security relies on sophisticated scientific evidence-gathering and knowledge-making focused on the human body. Bringing together new anthropological perspectives on the complexities of

security in the present moment, the contributors to *Bodies as Evidence* reveal how bodies have become critical sources of evidence that is organized and deployed to classify, recognize, and manage human life. Through global case studies that explore biometric identification, border control, forensics, predictive policing, and counterterrorism, the contributors show how security discourses and practices that target the body contribute to new configurations of knowledge and power. At the same time, margins of error, unreliable technologies, and a growing suspicion of scientific evidence in a "post-truth" era contribute to growing insecurity, especially among marginalized populations.
