Power

A representative electromagnetic pulse from a high altitude burst will typically have maximum field strengths near the ground on the order of 50 KV/meter and a time duration on the order of a microsecond and rise times on the order of 10 nanoseconds. Installation of EMP protective measures as a retrofit to existing installations is more costly that would have been required if included in the original design and construction. A basic approach for EMP protection of small city, county and State facilities includes containment of communications equipments in a minimus size, double layer galvanized steel wire mesh enclosure, with operators and hand sets adjacent to or remote from the shielded enclosure with connecting cables run in ferrous conduit with threaded couplings. Power cables should be contained in ferrous conduit and there should be a single panel entry of power, hand sets, control, and antenna cable conductors.

War Department Technical Manual

Safe, efficient, code-compliant electrical installations are made simple with the latest publication of this widely popular resource. Like its highly successful previous editions, the National Electrical Code 2011 spiral bound version combines solid, thorough, research-based content with the tools you need to build an in-depth understanding of the most important topics. New to the 2011 edition are articles including first-time Article 399 on Outdoor, Overhead Conductors with over 600 volts, first-time Article 694 on Small Wind Electric Systems, first-time Article 840 on Premises Powered Broadband Communications Systems, and more. This spiralbound version allows users to open the code to a certain page and easily keep the book open while referencing that page. The National Electrical Code is adopted in all 50 states, and is an essential reference for those in or entering careers in electrical design, installation, inspection, and safety.
