Atlas at War! collects fifty hard-hitting stories from Atlas Comics, the company that became Marvel Comics and published more war titles than anyone in the industry between the years 1951 and 1960. Comics historian Dr. Michael J. Vassallo has chosen the best of the best, many of which are coming back into print for the first time, from sixteen different Atlas war titles and featuring the artwork of twenty different artists--giants of the genre,

including Russ Heath, John Severin, Bernie Krigstein, Joe Maneely, Jerry Robinson, Steve Ditko, and Jack Kirby. Each page has been meticulously restored from its first printing by comic art restorer Allan Harvey. Atlas at War! covers the brutal pre-code period where graphic depictions of war action were rendered by artists who were World War II veterans themselves, as well as the post-code period, where code restrictions forced creators to tell stories without graphic violence but produced some of the most beautiful comic art of the genre. In addition to the artists, stories cover all aspects of war--from famous campaigns, weaponry, and personal soldier stories to political topics, Nazi atrocities, and even one story tinged with pre-code horror! Often overlooked in favor of its competitors, Atlas at War! will finally show that Atlas' war titles were second to no one.

Ulli Steltzer, a distinguished photographer, takes the reader into the carving shed and studio to see Robert Davidson as he creates both monumental poles and intricately detailed powerful masks. More than 100 of her black-and-white photographs, reproduced in duotone, record both the evolution of Davidson and his art, from the early days up to the present, a span of 25 years. In the accompanying text and captions, Robert Davidson writes movingly about growing up Haida and his development as an artist, describes the creative and practical process of carving poles and masks, and discusses the place of art in Haida culture. An introduction by Aldona Jonaitis assesses Robert Davidson's place in the world of art. Robert Davidson has produced an internationally acclaimed body of art, in particular a number of large totem poles and masks in collections in Canada and the United States, including the Southwest Museum in Los Angeles, the National Gallery of Canada, the Canadian Museum of Civilization, and the Vancouver Art Gallery.

WINNER OF THE DAYTON LITERARY PEACE PRIZE A letter from a German soldier to his grandson recounts the terrors of war on the Eastern Front, and a postwar ordinary life in search of atonement, in this “ raw, visceral, and propulsive ” novel (New York Times Book Review). A New York Times Book Review Editors ’ Choice In the throes of the Second World War, young Meissner, a college student with dreams of becoming a scientist, is drafted into the German army and sent to the Eastern Front. But soon his regiment collapses in the face of the onslaught of the Red Army, hell-bent on revenge in its race to Berlin. Many decades later, now an old man reckoning with his past, Meissner pens a letter to his

grandson explaining his actions, his guilt as a Nazi participator, and the difficulty of life after war. Found among his effects after his death, the letter is at once a thrilling story of adventure and a questing rumination on the moral ambiguity of war. In his years spent fighting the Russians and attempting afterward to survive the Gulag, Meissner recounts a life lived in perseverance and atonement. Wracked with shame—both for himself and for Germany—the grandfather explains his dark rationale, exults in the courage of others, and blurs the boundaries of right and wrong. We Germans complicates our most steadfast beliefs and seeks to account for the complicity of an entire country in the perpetration of heinous acts. In this breathless and page-turning story, Alexander Starritt also presents us with a deft exploration of the moral contradictions inherent in saving one's own life at the cost of the lives of others and asks whether we can ever truly atone.

Computers and flying machines are two dominant technologies of our time. "Beyond the Limits" shows the ways in which they interact, clearly illustrating the complex issues and devices involved in their mutual evolution. It describes and illustrates how computer technology has affected the theory and practice of the engineering and operations of aircraft and spacecraft from 1945 to the present. Paul Ceruzzi points out that the "revolution" in aerospace technology has been going on for at least forty years. For the first time, he tells how modern flight depends on computers, how this came about, and what its consequences are. He brings to light new facets of the individual stories of aerospace and computing, while also

revealing more general themes about the dynamics and evolution of these modern technologies. Spacecraft and fighters make use of leading-edge computer technologies in their design, testing manufacture, navigation and operation; moreover pilots and astronauts rely on computer simulations throughout their training. Ceruzzi describes these technologies and their history. In separate chapters he focuses on Northrop ("midwife of the computer industry"), missile tracking, Whirlwind, Apollo, Minuteman, and the software involved. An appendix discusses the role that on-board and ground computers played in the explosion of the space shuttle "Challenger. Paul Ceruzzi is Associate Curator at the National Air and Space Museum of the Smithsonian Institution. "Beyond the Limits" was written to accompany the opening of a major new gallery devoted to the subject at the Smithsonian's National Air and Space Museum.

U.S., like China, was too great for the London money lords to occupy by force. One way America is being brought to heel is by the drug trade. Crime and other social problems in the U.S. and Mexico are massively influenced by drugs and drug dealing. Illicit drugs may now account for as much as \$1 trillion annually in financing for criminal activity and corruption. TOPICS: The East India Company; British role in the drug trade, from the wars on China, the HongShanghai Bank, Bronfmans, Prohibition, and Organized Crime in the U.S. Financial derivatives; Wall St., money laundering; medical marijuana. decriminalization; Soros and IMF links to drugs. Afghan opium; Colombian cartel; terrorism. Russia targeted by Dope, Inc. cocaine, heroin, amphetamines. More than 30 years have passed since the first edition of Dope, Inc. was published, in 1978. Commissioned by Lyndon Larouche, it threatened the world's power structure. It became America's underground best-seller. Dope, Inc. drew the line between American patriots and the British apparatus destroying the USA. The London and Wall Street bankers ran for cover. A mammoth campaign of slander and government dirty tricks tried to bury the authors, because Dope, Inc. revealed the most deeply held secrets of the big names behind the world's illegal narcotics trade. In Venezuela, the leading drug-running families who were exposed in the Spanish-language version, Narcotrafico, S.A., used

their political influence to have it banned and confiscated. Financiers scrambled to control the damage of this unprecedented exposure. The Hongkong and Shanghai Banking Corporation was denied a license in New York State because it failed to refute the charges in Dope, Inc, when the state demanded accounting of its hidden profits, silent subsidiaries, and paraphernalia of money-laundering. Now in 2010, Dope, Inc. is completely updated: Soros - Afghanistan - the government and bankers behind the cartels. Today the British-controlled dope trade finances the world's leading terrorist entities - Afghanistan's Taliban, the Chechen rebels, the FARC guerrillas of Colombia. Dope money supports the bankrupt world financial system. A trillion dollars goes through the Cayman Islands, the Isle of Man, Dubai. Speculation makes it trillions more. It sucks the blood of the real economy; and the dope destroys mankind's powers of reason.

Peter Neumann analyzes the failure modes, recommends sequences for prevention and ends his unique book with some broadening reflections on the future." —Ralph Nader, Consumer Advocate This book is much more than a collection of computer mishaps; it is a serious, technically oriented book written by one of the world's leading experts on computer risks. The book summarizes many real events involving computer technologies and the people who depend on those technologies, with widely ranging causes and effects. It considers problems attributable to hardware, software, people, and natural causes. Examples include disasters (such as the Black Hawk helicopter and Iranian Airbus shootdowns, the Exxon Valdez, and various transportation accidents); malicious hacker attacks; outages of telephone systems and computer networks; financial losses; and many other strange happenstances (squirrels downing power grids, and April Fool's Day pranks). Computer-Related Risks addresses problems involving reliability, safety, security, privacy, and human well-being. It includes analyses of why these cases happened and discussions of what might be done to avoid recurrences of similar events. It is readable by technologists as well as by people merely interested in the uses and limits of

"In order to highlight this "child-centred" approach, the authors studied the way children tackle the particular problems posed by limitations of income. How do children learn (a) the relationship between choices available in the present and the future, (b) to spread their limited financial resources over time into the future and (c) about the strategies, such as banking, that allow them to protect those resources from threats and temptations? In short, how do children learn to save?" "This volume goes some way to answering these and related questions and in so doing sets up an alternative framework for the study of the emergence of economic awareness. In addition, commentaries by Anna E. Berti (Chapter 7) and Sharone L. Maital and Shlomo Maital (Chapter 8) explore these issues further."--BOOK JACKET.
