Learn about the history of Times Square in New York with iMinds Travel's insightful fast knowledge series. Times Square stands proudly in the centre of New York City. Broadway meets Seventh Avenue in a place where tourists meet and fall in love with New York. The bright lights and billboards that seem to stretch on forever are just part of what makes Times Square so famous and so attractive. It

is also the centre of New York's famous Broadway theatre district and is the place where millions of people come together to bring in the New Year. Times Square makes up most of the western midtown Manhattan area. In the 1800s the area was known as Longacre Square. It housed horse exchanges and stables, carriage factories, blacksmith's shops and upscale brothels. In 1904, The New York Times moved in and established one of the tallest buildings in the city. The newspaper convinced the city to create a subway stop there and to rename the area 'Times Square'. When the new building was opened on 31 December 1904, the newspaper celebrated by holding a public New Year's Eve celebration in the square, complete with fireworks.

This tradition is still carried on today. So the New York Times had a significant part in the making of Times Square. Yet it was another publication that brought the drama to the square. iMinds will tell you the story behind the place with its innovative travel series, transporting the armchair traveller or getting you in the mood for discover on route to your destination. iMinds brings targeted knowledge to your eReading device with short information segments to whet your mental appetite and broaden your mind.

Land Rover Series II, IIA and III Springer  
This book introduces the principles and practices in automotive systems, including modern automotive systems that incorporate the latest trends in the

automobile industry. The fifteen chapters present new and innovative methods to master the complexities of the vehicle of the future. Topics like vehicle classification, structure and layouts, engines, transmissions, braking, suspension and steering are illustrated with modern concepts, such as battery-electric, hybrid electric and fuel cell vehicles and vehicle maintenance practices. Each chapter is supported with examples, illustrative figures, multiple-choice questions and review questions. Aimed at senior undergraduate and graduate students in automotive/automobile engineering, mechanical engineering, electronics engineering, this book covers the following: Construction and working details of all modern as well as fundamental automotive systems

Complexities of operation and assembly of various parts of automotive systems in a simplified manner Handling of automotive systems and integration of various components for smooth functioning of the vehicle Modern topics such as battery-electric, hybrid electric and fuel cell vehicles Illustrative examples, figures, multiple-choice questions and review questions at the end of each chapter Proceedings of China SAE Congress 2020: Selected Papers CarTech Inc Concern about the reduced availability and the increased cost of petroleum fuels prompted great efforts in recent years to reduce the fuel consumption of auto mobiles. The ongoing efforts to reduce fuel consumption have addressed many relevant factors, including increased engine performance, reduced friction, use of lightweight materials, and reduced aerodynamic drag. The results of the investigations assessing the various factors affecting fuel economy have been published in journals, conference proceedings, and in

company and government reports. This proliferation of technical information makes it difficult for workers to keep abreast of aU developments. The material presented in this book brings together in a single volume much of the relevant materials, summarizes many of the state-of-the-art theories and data, and provides extensive lists of references. Thus, it is hoped that this book will be a useful reference for specialists and practicing engineers interested in the fuel economy of automobiles. J. C. HILLIARD o. S. SPRINGER vii CONTENTS 1. Since its introduction in 1997, the Porsche Boxster has earned a reputation as one of the world's greatest sports cars, as well as a huge, loyal following of devoted drivers. This book is aimed at those owners of Boxsters who want to improve their machines while avoiding thousands of dollars in mechanic's costs. Clearly and simply written, with straightforward illustrations, this manual offers 101 projects to help you modify, maintain, and enhance your Porsche. Focusing on the 986 and 987 Boxster models, 101 Projects for Your Porsche Boxster presents all the necessary information, associated costs, and pitfalls to avoid when performing a wide array of projects. In a word, it makes owning a Porsche Boxster an unqualified thrill.

The meeting of Aquatic Noise 2013 will introduce participants to the most recent research data, regulatory issues and thinking about effects of man-made noise and will

foster critical cross-disciplinary discussion between the participants. Emphasis will be on the cross-fertilization of ideas and findings across species and noise sources. As with its predecessor, The Effects of Noise on Aquatic Life: 3rd International Conference will encourage discussion of the impact of underwater sound, its regulation and mitigation of its effects. With over 100 contributions from leading researchers, a wide range of sources of underwater sound will be considered. Automotive Systems Simon and Schuster For more than 70 years, memorable automobiles have rolled out of Bayerische Motor Werke. This sprawling photographic history spans the entire range, from the 1927 Dixi 3/51 PS to the James Bond Z8 roadster. The story of BMW's genesis in the aircraft industry is followed by complete series and model histories and overviews of BMW forays into motorsport. Gorgeously illustrated with rare archival imagery and

modern color photos, this lavish treatment features classics like the mystically elegant pre-war 328, post-war 502 luxury saloons, the curious single-cylinder Isetta, hand-built 507 sports cars, the revolutionary 2002 Turbo, the M1 supercar, the Z3 roadster and much more.

A destitute tenant farmer, in Pyung Yang, Korea, gives away his twelve year old son to the nationalist patriot, Doh Sahn, in 1908. Following the ardent Patriot, thrusts the teenager into the midst of an international struggle raging in the Korean Peninsula. Japan proceeds to annex Korea into the Japanese Empire. The Patriot fights to thwart the annexation. As the Japanese police close in, the Patriot and the teenager escape to Tsingtao and Vladivostok; the two finally reach New York in 1911, as Korea is no more. The teenager

struggles alone to survive in America, and enters Asbury College in Kentucky. Rev. Robert Nahm-Soo Chung in 1926 returns to his homeland. His Evangelistic Crusade Team carries a huge tent of six thousand capacity, on a van-truck provided by American campgrounds and churches. The Team travels even to the remote areas of the Peninsula. He preaches to the throngs suffering under the Japanese, during their darkest hours. Hundreds of thousands of people come to Jesus. He suffers torture in the Japanese prison, for preaching the gospel, and for his close tie with the Patriot. You will walk through his tears and triumphs to preach the gospel. Paul M. An Introduction to Modern Vehicle Design starts from basic

principles and builds up analysis procedures for all major aspects of vehicle and component design. Subjects of current interest to the motor industry - such as failure prevention, designing with modern material, ergonomics, and control systems - are covered in detail, with a final chapter discussing future trends in automotive design. Extensive use of illustrations, examples, and case studies provides the reader with a thorough understanding of design issues and analysis methods.

The 46th volume of the journal "Advanced Engineering Forum" contains papers that

present the research results on properties of carbon fibre reinforced metal matrix composite and multiwalled carbon nanotubes nanocomposite, conditions of mass and heat transfer under nanofluid by numerical modelling, strength properties and microstructure of sandcrete blocks incorporated with maize straws. The volume also describes the optimal control strategy for energy management of PV-diesel-battery hybrid power system of a stand-alone micro-grid and analyses the thermal and emission performance of in-house developed natural and forced draft metal biomass cookstoves. The analysis of the possibility of implementing the system of qualification and certification of the inspection personnel in the welding field will be also interesting to readers. The professionals, students and scientific investigators working in the various engineering fields will find this volume of value.

In spite of all the assistance offered by electronic control systems, the latest generation of passenger car chassis still relies on conventional chassis elements. With a view towards driving dynamics, this book examines these conventional elements and their interaction with mechatronic systems. First, it describes the fundamentals and design of the chassis and goes on to examine driving dynamics with a particularly practical focus. This is followed by a detailed description and explanation of the modern components. A separate section is devoted to the axles

and processes for axle development. With its revised illustrations and several updates in the text and list of references, this new edition already includes a number of improvements over the first edition.

This proceedings volume contains papers that have been selected after review for oral presentation at ROMANSY 2016, the 21th CISM-IFTOMM Symposium on Theory and Practice of Robots and Manipulators.

These papers cover advances on several aspects of the wide field of Robotics as concerning Theory and Practice of Robots and Manipulators.

ROMANSY 2016 is the 21st event in a series that started in 1973 as one of the first conference activities in the world on Robotics. The first event was held at CISM (International Centre for Mechanical Science) in Udine, Italy on 5-8 September 1973. It was also the

first topic conference of IFTOMM (International Federation for the Promotion of Mechanism and Machine Science) and it was directed not only to the IFTOMM community.

ROMANSY 21 - Robot Design, Dynamics and Control Haynes Manuals In chassis development, the three aspects of safety, vehicle dynamics and ride comfort are at the top of the list of challenges to be faced. Addressing this triad of challenges becomes even more complex when the chassis is required to interact with assistance systems and other systems for fully automated driving. What is more, new demands are created by the introduction of modern electric and electronic architectures. All these requirements must be met by the chassis, together with its subsystems, the steering, brakes, tires and wheels. At the same time, all physical relationships and interactions have to be taken into account.

This book is a comprehensive source of information on various aspects of ceramic matrix composites (CMC). It

covers ceramic and carbon fibers; the fiber-matrix interface; processing, properties and industrial applications of various CMC systems; architecture, mechanical behavior at room and elevated temperatures, environmental effects and protective coatings, foreign object damage, modeling, life prediction, integration and joining. Each chapter in the book is written by specialists and internationally renowned researchers in the field. This book will provide state-of-the-art information on different aspects of CMCs. The book will be directed to researchers working in industry, academia, and national laboratories with interest and professional competence on CMCs. The book will also be useful to senior year and graduate students pursuing degrees in ceramic science and engineering, materials science and engineering, aeronautical, mechanical, and civil or aerospace engineering. Presents recent advances, new approaches and discusses new issues in the field, such as foreign object damage, life predictions, multiscale modeling based on probabilistic approaches, etc. Caters to the increasing interest in the application of ceramic matrix composites (CMC) materials in areas as diverse as aerospace, transport, energy, nuclear, and environment. CMCs are considered an enabling technology for advanced aeropropulsion, space propulsion, space power, aerospace vehicles, space structures, as well as nuclear and chemical industries. Offers detailed descriptions of ceramic and carbon fibers; fiber-matrix interface; processing, properties and industrial applications of various CMC systems; architecture, mechanical behavior at room and elevated temperatures, environmental effects and protective coatings, foreign object damage, modeling, life prediction, integration/joining. The Effects of Noise on Aquatic Life II Motorbooks Non-exhaust emissions of particulate matter constitute a little-known but rising share of emissions from road traffic and have significant negative impacts on public health. This report synthesizes the current state of knowledge about the nature, causes, and consequences of non-exhaust particulate emissions. It also projects how particulate matter emissions from non-exhaust sources may evolve in future years and reflects on policy instrument mixes that can address this largely ignored environmental issue.

The book presents –  
based on the most  
recent research and  
development results  
worldwide - the  
perspectives of new  
propulsion concepts  
such as electric cars  
with batteries and fuel  
cells, and furthermore

acceleration behaviour,  
specific fuel  
consumption and  
pollutant emissions.  
The alternative fuels  
are discussed in terms  
of availability,
