Through continued collaboration and the sharing of ideas, data, and results, the international community of researchers and practitioners has developed an understanding of many facets of the human response to vibration. At a time when the EU is preparing to adopt a directive on health risks arising from occupational exposure to vibration, *Human Response to Vibration* offers authoritative guidance on this complex subject.

Individual chapters in the book examine issues relating to whole-body vibration, hand-arm vibration, and motion sickness. Vibration measurements and standards are also addressed. This book meets the needs of those requiring

knowledge of human response to vibration in order to make practical improvements to the physical working environment. Written with the consultant, practitioner, researcher, and student in mind, the text is designed to be an educational tool, a reference, and a stimulus for new ideas for the next generation of specialists.

The paper investigates the divergence between inflation and monetary expansion in Zimbabwe since late 2003. The substantial decline in velocity and increasing levels of real money balances during 2004 are at odds with a record of inflation closely tracking the growth rates of monetary aggregates in the past.

Possible explanations for the divergence include an unstable demand for money, a sudden shift in the underlying demand

---

for real balances due to a sharp change in an explanatory variable, and a structural break or aberration in a normally stable money demand relation reflecting some unexplained factor such as repressed inflation (given administered prices) or measurement errors in the consumer price index. The results of the study point to the last possibility as the most likely explanation.

One of the most

famous of British cars, the diminutive but robust 750cc Austin Seven, introduced in 1922, changed the course of automobile design and proved the viability of the small-capacity four-cylinder car. The salvation of the Austin company, it was aimed at families who might otherwise have travelled by motorcycle and sidecar, and it remained in production until 1939. The Seven performed as well on the race track as it did on the road and inspired a team of magnificent twin overhead camshaft single-seaters. It survives in respectable numbers to provide new

Since the invention of automobiles, there were sporty cars and there were practical cars. BMW engineers dared to design a car with features of both. In doing so, they created one of the classic cars of all time, the 3-Series. For over 40 years, this model has given its owner the joy of everyday driving. The commute to work suddenly was as much fun as track day. Follow the story of this category-creating car from the origins of its maker as a World War I airplane engine manufacturer until the hugely successful car it is today. This is the first of three books about the history of the 3-Series. It tells the tale of a failing German car company unable to find its way after World War II. A last-minute loan gave BMW one last chance. The company used that opportunity to create the Neue Klasse generation of cars in which we find the genetic origins of the 3-Series. In the 1970s, the world was reacting to a severe oil-shortage. Introduced just at this right time was the practical but sporty first generation of 3-Series,

the E21. With the introduction of the E30, the second generation of the 3-Series, BMW took the success of this two-door coupe and ran with it, creating sedans, wagons, all-wheel drive vehicles and the M3 supercar.

It may seem extraordinary that architects - designers of stationary objects - should concern themselves with automobile design; but the automobile has long touched architects' imaginations, appearing to them as a house on wheels, as mobile accommodation. When the motor-driven vehicle was invented, architects recognised that its image, form and function would affect the quality of people's lives and their surroundings, and that to propose an automobile was a way to perfect the synthesis of art, design and the latest technology. A number of well-known architects liked to pair the architecture of their houses with their favourite automobiles in order to illustrate

the close functional and aesthetic relationship between them. Some believed that their cars had to 'look becoming to' their architecture, and included automobiles in perspective views and photographs of their completed buildings, the result being a harmonising composition of the two elements that stressed their close affinity. The celebrated 'Ten Automobiles' exhibition at the Museum of Modern Art, New York in 1953, with its proclamation that 'automobiles are twentieth-century artefacts', brought into focus the automobile as an influential design object. Architects realised the importance of the automobile as an icon of an era and sought not only to design motorcars but to apply the principles of automotive technology and design to their architecture. This book explores automotive design by leading architects such as Frank Lloyd Wright, Le Corbusier, Walter Gropius, Marcel Breuer, Adolf Loos, Richard Buckminster Fuller, Gio Ponti, Carlo Mollino, Norman Foster, Jan Kaplicky and others and its influence on their architecture.

The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers integerating themselves deeper into the

---

development processes of different OEMs, analysts estimating economical risks and opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of automotive development – the core subject of this book. Let's face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that

transmit their propulsive power to the road surface via gearboxes, transmission shafts and wheels, which together with spring-damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.

Service and Repair Manual for BMW 1 Series Motorbooks International

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles

would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Since the early 2000s, the  
apparent explosion of interest  
in Volkswagens with original  
paint, rust and patina has  
inspired a generation of car  
fanatics, who might not be  
able to afford to restore a car  
to show condition, but still  
want a good looking, cool car  
that will stand out from the  
crowd. Once looked upon as  
being in need of restoration,  
cars with original paint, rust  
and patina, especially within  
the global Volkswagen  
community, have gradually  
become far more popular  
than restored cars. When  
walking down a line of cars at  
a car show, it ' s easy to see

why; these cars are rare, unspoiled survivors — cars that tell a story of an interesting and varied past. The look of the Volkswagens being built in this style is so honest, unspoiled and characterful, that it has begun to inspire the media; even Hollywood movie stars and celebrities. Whilst this has undoubtedly resulted in increased car values, and turned a brand of cars that had always been a cheap, honest mode of transportation into something cool with a high price tag, the generation it initially inspired has grown with the hobby, and produced a micro-industry that still manages to embrace the 'Built not bought' ethos. This book, superbly illustrated with stunning colour photographs, takes an inside look at some of the key car builders, dealers,

celebrities and hobbyists, as well as the different styles of build, meaning every single car has a style all its own. Foreword by Drew Pritchard of TV 's ' Salvage Hunters ' fame.
