In recent years there has been enormous activity in the theory of algebraic curves. Many long-standing problems have been solved using the general techniques developed in algebraic geometry during the 1950's and 1960's. Additionally, unexpected and deep connections between algebraic curves and differential equations have been uncovered, and these in turn shed light on other classical problems in curve theory. It seems fair to say that the theory of algebraic curves looks completely different now from how it appeared 15 years ago; in particular, our current state of knowledge represents a significant advance beyond the legacy left by the classical geometers such as Noether, Castelnuovo, Enriques, and Severi. These books give a presentation of one of the central areas of this recent activity; namely, the study of linear series on both a fixed curve (Volume I) and on a variable curve (Volume II). Our goal is to give a comprehensive and self-contained account of the extrinsic geometry of algebraic curves, which in our opinion constitutes the main geometric core of the recent advances in curve theory. Along the way we shall, of course, discuss applications of the theory of linear series to a number of classical topics (e.g., the geometry of the Riemann theta divisor) as well as to some of the current research (e.g., the Kodaira dimension of the moduli space of curves).

This inspiring personal journey offers unique, insider perspectives on

Bangladesh and its many messages of struggle and triumph. Shahidul Alam is a photographer, writer, curator and activist. A former president of the Bangladesh Photographic Society, Alam set up the award winning Drik agency, the Bangladesh Photographic Institute, and Pathshala, the South Asian Institute of Photography; considered one of the finest schools of photography in the world. Over 30 years, Alam's leadership in Bangladesh has led the way in developing photography as a discipline, with an entirely new generation of acclaimed artists in the international arena. His style is personal, sometimes fast paced, often reflective, with magnificent imagery interwoven throughout the narrative. This book showcases Shahidul Alam's photographs, more than 100 colour and black and white plates illustrating the journey of an artistic, social, and political witness from inside Bangladesh. This ground-breaking work retraces his visual journey and personal vision spanning three decades, and provides the best interpretative and investigative angles into a culture and national reality, hitherto often misunderstood in the West. Using photography and journalism as its parameters, it is the first comprehensive vision of Bangladesh; these images are not 'about' the region from a European perspective; this is not an ethnographic account of an ex-colonial world. Instead, its on-the-ground insight aspires to explore its topography with decidedly indigenous eyes. Alam founded an artistic movement that cannot be silenced: the emergence of 'indigenous' photographers, achieving an intimacy with their subjects that truly understands their human condition.

I allowed others to decide my future . . . then I lost the best thing that ever happened to me. I let go of the girl I loved in exchange for a life I was told I wanted. The web services architecture provides a new way to think about and implement application-to-application integration and interoperability that makes the development platform irrelevant. Two applications, regardless of operating system, programming language, or any other technical implementation detail, communicate using XML messages over open Internet protocols such as HTTP or SMTP. The Simple Open Access Protocol (SOAP) is a specification that details how to encode that information and has become the messaging protocol of choice for Web services. Programming Web Services with SOAP is a detailed guide to using SOAP and other leading web services standards--WSDL (Web Service Description Language), and UDDI (Universal Description, Discovery, and Integration protocol). You'll learn the concepts of the web services architecture and get practical advice on building and deploying web services in the enterprise. This authoritative book decodes the standards, explaining the concepts and implementation in a clear, concise style. You'll also learn about the major toolkits for

building and deploying web services. Examples in Java, Perl, C#, and Visual Basic illustrate the principles. Significant applications developed using Java and Perl on the Apache Tomcat web platform address real issues such as security, debugging, and interoperability. Covered topic areas include: The Web Services Architecture SOAP envelopes, headers, and encodings WSDL and UDDI Writing web services with Apache SOAP and Java Writing web services with Perl's SOAP::Lite Peer-to-peer (P2P) web services Enterprise issues such as authentication, security, and identity Up-and-coming standards projects for web services Programming Web Services with SOAP provides you with all the information on the standards, protocols, and toolkits you'll need to integrate information services with SOAP. You'll find a solid core of information that will help you develop individual Web services or discover new ways to integrate core business processes across an enterprise.
