Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemists so they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes. Using recent kinetic methods of investigations as well as such spectroscopic methods as electron spin resonance, nuclear magnetic resonance, and chemiluminescence, 11 papers examine quantum-level calculations of chemical reactions. Presented by Zaikov (Institute of Biochemical Physics, Russia) and Jimenez (University of Alicante, Spain), the papers discuss such specific topics as the behaviour of molecules of low-molecular substances in the presence of chain molecules, ozone degradation of polyolefins with the example of paraffines and polyolefins, interactions of surfactants and cellulose derivatives in homogenous and heterogeneous systems, and transcrystallinity in natural fillers-polypropylene composites.
