of wellbeing and disease prevention in an exhilarating new direction.

In 1806 a British expeditionary force captured Buenos Aires. Over the next eighteen months, Britain was sucked into a costly campaign on the far side of the world. The Spaniards were humbled on the battlefield and Montevideo was taken by storm, but the campaign ended in disaster when 6000 redcoats and riflemen surrendered following a bloody battle in the streets of the Argentine capital. So ended one of the most humiliating and neglected episodes of the entire Napoleonic Wars.??In The British Invasion of the River Plate Ben Hughes tells the story of this forgotten campaign in graphic detail. His account is based on research carried out across two continents. It draws on contemporary newspaper reports, official documents and the memoirs, letters and journals of the men who were there.??He describes the initially successful British invasion, which was stopped when their troops were surrounded in Buenos Aires main square and forced to surrender, and the second British attack which was eventually defeated too. His narrative covers the course of the entire campaign and its aftermath. While focusing on the military and political aspects of the campaign, his book gives an insight into the actions of the main protagonists William Carr Beresford, Sir Home Popham, Santiago de Liniers and

Black Bob Craufurd and into the experiences of the forgotten rank and file.??He also considers the long-term impact of the campaign on the fortunes of the opposing sides. Many of the British survivors went on to win glory in the Peninsular War. For the Uruguayans and Argentines, their victory gave them a sense of national pride that would eventually encourage them to wrest their independence from Spain.

Masters of All They Surveyed Simon and Schuster

The writings of George Washington from the original manuscript sources 1745-1799; prepared under the direction of the United States George Washington Bicentennial Commission and published by authority Library of Congress.

McFarland

Chronicling the British pursuit of the legendary El Dorado, Masters of All They Surveyed tells the fascinating story of geography, cartography, and scientific exploration in Britain's unique South American colony, Guyana. How did nineteenth-century Europeans turn areas they called terra incognita into bounded colonial territories? How did a tender-footed gentleman, predisposed to seasickness (and unable to swim), make his way up churning rivers into thick jungle, arid savanna, and forbidding mountain ranges, survive for the better part of a decade, and emerge with a map? What did that map mean? In answering these questions, D. Graham Burnett brings to light the work of several such explorers, particularly Sir Robert H. Schomburgk, the man who claimed to be the first to reach the site of Ralegh's El Dorado. Commissioned by the Royal Geographical Society and later by the British Crown, Schomburgk explored and mapped regions in modern Brazil, Venezuela, and Guyana, always in close contact with Amerindian communities. Drawing heavily on the maps, reports, and letters that Schomburgk sent back to England, and especially on the luxuriant images of survey landmarks in his Twelve Views in the Interior of Guiana (reproduced in color in this book), Burnett shows how a vast network of traverse surveys, illustrations, and travel narratives not only laid out the official boundaries of British Guiana but also marked out a symbolic landscape that fired the British imperial imagination.

Engagingly written and beautifully illustrated, Masters of All They Surveyed will interest anyone who wants to understand the histories of colonialism and science.

Statement of Disbursements of the House Random House UK

One of the Ten Best Books of The New York Times Book Review Winner of the Los Angeles Times Book Prize Now a miniseries from Hulu starring James Franco ON NOVEMBER 22, 1963, THREE SHOTS RANG OUT IN DALLAS, PRESIDENT KENNEDY DIED, AND THE WORLD CHANGED. WHAT IF YOU COULD CHANGE IT BACK? In this brilliantly conceived tour de force, Stephen King—who has absorbed the social, political, and popular culture of his generation more imaginatively and thoroughly than any other writer—takes readers on an incredible journey into the past and the possibility of altering it. It begins with Jake Epping, a thirty-five-year-old English teacher in Lisbon Falls, Maine, who makes extra money teaching GED classes. He asks his students to write about an event that changed their lives, and one essay blows him away—a gruesome, harrowing story about the night more than fifty years ago when Harry Dunning's father came home and killed his mother, his sister, and his brother with a sledgehammer. Reading the essay is a watershed moment for Jake, his life—like Harry 's, like America's in 1963—turning on a dime. Not much later his friend AI, who owns the local diner, divulges a secret: his storeroom is a portal to the past, a particular day in 1958. And AI enlists Jake to take over the mission that has become his obsession—to prevent the Kennedy assassination. So begins Jake 's new life as George Amberson, in a different world of Ike and JFK and Elvis, of big American cars and sock hops and cigarette smoke everywhere. From the dank little city of Derry, Maine (where there 's Dunning business to conduct), to the warmhearted small town of Jodie, Texas, where Jake falls dangerously in love, every turn is leading eventually, of course, to a troubled loner named Lee Harvey Oswald and to Dallas, where the past becomes heart-stoppingly suspenseful, and where history might not be history anymore. Time-travel has never been so believable. Or so terrifying.

There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, How People Learn: Brain, Mind, Experience, and School: Expanded Edition was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. How People Learn II: Learners, Contexts, and Cultures provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an indepth look at the constellation of influences that affect individual learning. How People Learn II will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

Colburn's United Service Magazine and Naval and Military Journal Oxford University Press, USA

Shifting faculty roles in a changing landscape Ernest L. Boyer's landmark book Scholarship Reconsidered: Priorities of the Professoriate challenged the publish-or-perish status quo that dominated the academic landscape for generations. His powerful and enduring argument for a new approach to faculty roles and rewards continues to play a significant part of the national conversation on scholarship in the academy. Though steeped in tradition, the role of faculty in the academic world has shifted significantly in recent decades. The rise of the non-tenuretrack class of professors is well documented. If the historic rule of promotion and tenure is waning, what role can scholarship play in a fragmented, unbundled academy? Boyer offers a still much-needed approach. He calls for a broadened view of scholarship, audaciously refocusing its gaze from the tenure file and to a wider community. This expanded edition offers, in addition to the original text, a critical introduction that explores the impact of Boyer's views, a call to action for applying Boyer's message to the changing nature of faculty work, and a discussion guide to help readers start a new conversation about how Scholarship Reconsidered applies today.

A native Georgian, James Hughes Callahan (1812 – 1856) migrated to Texas to serve in the Texas Revolution in exchange for land. In Seguin, Texas, where he settled, he met and married a divorc é e, Sarah Medissa Day (1822 – 1856). The lives of these two Texas pioneers and their extended family would become so entwined in the events and experiences of the nascent nation and state that their story represents a social history of nineteenth-century Texas. From his arrival as a sergeant with the Georgia Battalion, through the ill-fated 1855 expedition that bears his name, to his shooting death in a feud with a neighbor, Callahan was a soldier, a Texas Ranger, a rancher, and a land developer, at every turn making his mark on the evolving Guadalupe River Basin. Separately, Sarah 's family 's journey reflected the experience of many immigrants to Texas after its war of independence. Thomas O. McDonald traces the pair 's respective paths to their

meeting, then follows as, together, they contend with conflict, troublesome social mores, the emergence of new industries, and the taming of the land, along the way helping to shape the Texas culture we know today. With a sharp eye for character and detail, and with a wealth of material at his command, author Thomas O. McDonald tells a story as crackling with life as it is steeped in scholarly research. In these pages the lives of the Callahan and Day families become a canvas on which the history of Texas—from revolution, frontier defense, and Indian wars to Anglo settlement and emerging legal and social systems—dramatically, inexorably unfolds.

This volume contains a comprehensive examination of the crucial first ten years of the Arab League and of the continuing dilemma it faces in juggling opposing local and regional interests.

The New York Times Index Syracuse University Press

From 1850 to 1854, the ambitious Commander Robert McClure captained the HMS Investigator on a voyage in search of the missing Franklin Expedition, which sailed from England into the Arctic in 1845 to map the last uncharted section of the North-West Passage. The Investigator and her consort the Enterprise were to pass through the Bering Strait from the west but a Pacific storm separated them, never to meet again. Obsessed with traversing the passage, McClure pressed on and HMS Investigator spent three years trapped in pack ice in Mercy Bay before the crew abandoned ship on foot. This book chronicles the voyage in detail. McClure and his relationships with his officers are at the heart of the story of the arduous journey, vividly illustrated by the paintings of Lt. Samuel Cresswell.
