Close readings of ostensibly “ blank ” works—from unprinted pages to silent music—that point to a new understanding of media. In No Medium, Craig Dworkin looks at works that are blank, erased, clear, or silent, writing critically and substantively about works for which there would seem to be not only nothing to see but nothing to say. Examined closely, these ostensibly contentless works of art, literature, and music point to a new understanding of media and the limits of the artistic object. Dworkin considers works predicated on blank sheets of paper, from a fictional collection of poems in Jean Cocteau's Orph é e to the actual publication of a ream of typing paper as a book of poetry; he compares Robert Rauschenberg's Erased De Kooning Drawing to the artist Nick Thurston's erased copy of Maurice Blanchot's The Space of Literature (in which only Thurston's marginalia were visible); and he scrutinizes the sexual politics of photographic representation and the implications of obscured or obliterated subjects of photographs. Reexamining the famous case of John Cage's 4'33 ” , Dworkin links Cage's composition to Rauschenberg's White Paintings, Ken Friedman's Zen for Record (and Nam June Paik's Zen for Film), and other works, offering also a “ guide to further listening ” that surveys more than 100 scores and recordings of “ silent ” music. Dworkin argues that we should understand media not as blank, base things but as social events, and that there is no medium, understood in isolation, but only and always a plurality of media: interpretive activities taking place in socially inscribed space.

A Clear Outline of Current Methods for Designing and Implementing Automotive Systems Highlighting requirements, technologies, and business models, the Automotive Embedded Systems Handbook provides a comprehensive overview of existing and future automotive electronic systems. It presents state-of-the-art methodological and technical solutions in the areas of in-vehicle architectures, multipartner development processes, software engineering methods, embedded communications, and safety and dependability assessment. Divided into four parts, the book begins with an introduction to the design constraints of automotive-embedded systems. It also examines AUTOSAR as the emerging de facto standard and looks at how key technologies, such as sensors and wireless networks, will facilitate the conception of partially and fully autonomous vehicles. The next section focuses on networks and protocols, including CAN, LIN, FlexRay, and TTCAN. The third part explores the design processes of electronic embedded systems, along with new design methodologies, such as the virtual platform. The final section presents validation and verification techniques relating to safety issues. Providing domain-specific solutions to various technical challenges, this handbook serves as a reliable, complete, and well-documented source of information on automotive embedded systems.

Empirically rich with highly detailed case studies on the North American Free Trade Agreement (NAFTA), this comprehensive volume studies the relationship between regionalism and state behavior. The traditional pattern of past studies of regionalism and regional integration has been to understand how state strategies molded the dynamics of an integration process. This study examines the impact of regionalism on the policy preferences of member states. This volume offers three theoretical contributions: • an empirical test of the convergence hypothesis • studies of institutions and their impact on domestic politics • an examination of foreign policy preferences and the neo-functional concept of 'spill-over' Recommended reading for students of regionalism, international political economy, international trade, foreign policy and North American studies.

What is overlanding? Wikipedia states, "Overlanding is self-reliant overland travel to remote destinations where the journey is the principal goal. Typically (but not exclusively), it is accomplished with mechanized off-road-capable transport (from bicycles to trucks) where the principal form of lodging is camping. It often lasts for extended periods of time (months to years) and spans international boundaries." Overlanding did not originate in America, and it is a little different here. You would be hard-pressed to find a bicycle out in the desert, and most people don’t stay out there quite that long. However, the spirit of the activity is the same. Do you want to give overlanding a try? Great! You will need some gear. In The Overlanding Vehicle Builder’s Guide, veteran racer, off-roader, and journalist Don Alexander provides a terrific overview of what to consider when building your overlanding rig. This includes the planned duration of the trip, the number of people in your party, how far off the beaten path you want to go, and the creature comforts you require. Understanding those wants and needs shapes what gear you need for the best experience. Covered are the strengths and weaknesses of the types of vehicles themselves, modifications to the vehicles to make them more capable, accessories (lighting, camping gear, food and water storage, etc.), and equipment for trail mishaps and recovery. Driving techniques and trail rules and etiquette are also included. If you are ready to build a rig or just want to know more about the hobby, this book is a great guide to help you get started.
