This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk of injuries and cancer, then how is it that giraffes get by? And why is it that society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.

Do you know how we got to here? In "Spinning World History," Eric Burnett takes you through all the major tales, traditions and turning points of world history - not just European history, but WORLD history. You'll figure out real quick that the West might have had some crowning moments, but for the whole of human history, it's been the Persians, the Indians, the Chinese, the Muslims or some horse peoples from the steppe that have truly turned us into the clever little

creatures we are today. And when most world history books fade off once the Cold War comes to a close, this sometimes cheekily-written tome just gets going. Updated to include contemporary debates over topics such as Brexit, the rise of ISIS, claims to the South China Sea, the mounting refugee crisis and the controversial presidency of Donald Trump, this second edition finishes with a distinctively comprehensive look at the 21st century challenges facing the nine major regions of today's world - Africa, Latin America, Japan, China, the Middle East, India, Russia, Europe and the United States.
