FrameMaker, which is at the core of the Adobe Technical Communication Suite, has long been the gold standard for writing, illustrating, and laying out technical documentation in print. With new features like support for rich media objects and powerful PDF export, FrameMaker excels at authoring online documents as well. This Classroom in a Book begins with a survey of the fundamentals of FrameMaker 11: setting up master pages, styling paragraphs, defining colors, placing graphics, creating tables, adding captions, cross-references, footnotes, and hyperlinks. Later chapters cover long-document features, such as tables of contents and indexes. Creating conditional text documents and preparing content for output to print or to screen (PDF or HTML) round out the coverage.

The Avidyne IFD5540, IFD540, and IFD440 GPS/NAV/COMs bring a new level of capability to general aviation GPS navigation. Now every pilot can have an airline-quality flight management system in his or her aircraft, reducing workload and increasing instrument capabilities. But you won't be able to take advantage of the IFD's capabilities if you don't know how to use it. That's where this book comes in. This is a self-paced course of instruction that will show you all the important features of the Avidyne IFD navigators. It

uses a scenario-based approach to present real world problems, and it gives you a hands-on opportunity to work through them using Avidyne's IFD simulator programs. You'll get to practice with all the important functions on your own, at your own speed. In simple, step-by-step lessons you'll learn how to download and operate the Avidyne IFD540/440 simulator, operate the IFD's VHF navigation and communications radios, set up and fly flight plans, save flight plans for later use, set up and fly holding patterns, fly instrument approaches, use the IFD's built-in databases and calculators, and customize your IFD to fit your own preferences. Plus, there's a quick reference guide to help you quickly find all of the IFD's important functions. This book will fully prepare you for effective training in your aircraft. It will save you hours of instructional time and many gallons of aviation fuel.

With almost 5 million copies sold 60 years after its original publication, generations of readers have now journeyed with

Milo to the Lands Beyond in this beloved classic. Enriched by Jules Feiffer's splendid illustrations, the wit, wisdom, and wordplay of Norton Juster's offbeat fantasy are as beguiling as ever. "Comes up bright and new every time I read it . . . it will continue to charm and delight for a very long time yet. And teach us some wisdom, too." --Phillip Pullman For Milo, everything's a bore. When a tollbooth mysteriously appears in his room, he drives through only because he's got nothing better to do. But on the other side, things seem different. Milo visits the Island of Conclusions (you get there by jumping), learns about time from a ticking watchdog named Tock, and even embarks on a quest to rescue Rhyme and Reason. Somewhere along the way, Milo realizes something astonishing. Life is far from dull. In fact, it's exciting beyond his wildest dreams!

From award-winning author, Ilona Andrews, an all-new novel set in the New York Times #1 bestselling Kate Daniels World and featuring Julie Lennart-Olsen, Kate and Curran's ward. Atlanta was always a dangerous city. Now, as waves of magic and technology compete for supremacy, it's a place caught in a slow apocalypse, where monsters spawn among the crumbling skyscrapers and supernatural factions struggle for power and survival. Eight years ago, Julie Lennart left Atlanta to find out who she was. Now she's back with a new face, a new magic, and a new name—Aurelia Ryder—drawn by the urgent need to protect the family she left behind. An ancient power is stalking her adopted mother, Kate Daniels, an enemy unlike any other, and a string of horrifying murders is its opening gambit. If Aurelia's true identity is discovered, those closest to her will die. So her plan is simple: get in, solve the murders, prevent the prophecy from being fulfilled, and get out without being recognized. She expected danger, but she never anticipated that the only man she'd ever loved could threaten everything. One

small misstep could lead to disaster. But for Aurelia, facing disaster is easy; it's relationships that are hard.

Most startups fail. But many of those failures are preventable. The Lean Startup is a new approach being adopted across the globe, changing the way companies are built and new products are launched. Eric Ries defines a startup as an organization dedicated to creating something new under conditions of extreme uncertainty. This is just as true for one person in a garage or a group of seasoned professionals in a Fortune 500 boardroom. What they have in common is a mission to penetrate that fog of uncertainty to discover a successful path to a sustainable business. The Lean Startup approach fosters companies that are both more capital efficient and that leverage human creativity more effectively. Inspired by lessons from lean manufacturing, it relies on "validated learning," rapid scientific experimentation, as well as a number of counter-intuitive practices that shorten product development cycles, measure actual progress without resorting to vanity metrics, and learn what customers really want. It enables a company to shift directions with agility, altering plans inch by inch, minute by minute. Rather than wasting time creating elaborate business plans, The Lean Startup offers entrepreneurs—in companies of all sizes—a way to test their vision continuously, to adapt and adjust before it's too late. Ries provides a scientific approach to creating and managing successful startups in an age when companies need to innovate more than ever.

'Unusually practical, non-patronising and authentic. Think Marie Kondo for the mind' Sunday Times Wellness pioneers Nadia Narain and Katia Narain Phillips have spent decades helping others to feel their best. But it took them a bit longer to learn to care for themselves. Here they share the small, achievable steps they picked up on a lifetime's journey towards self-care, and how you can apply them to your life, wherever you are. Right now, you may be deep in the waves of life, being tossed around. Learning self-care is like building your own life boat, plank by plank. Once you've got your boat, you'll still be

rocked by the same waves, but you'll have a feeling of safety, and a stability that means you can pick other people up on your way.

Bradshaw's continental [afterw.] monthly continental railway, steam navigation & conveyance guide. June 1847 - July/Oct. 1939
Morgan & Claypool

First published in 2006. The ambitious role cast for scientists in public affairs has been matched by an equal coyness on the part of scientists to play it. Yet in spite of themselves, they have been virtually dragged on to the political stage because of their 'collectivities' - groups formed over the last four centuries often more fugitive than institutional - which have helped modify the human environment, thereby enabling men to emancipate themselves from the tyranny of the present and plan for the future. The byproducts of such plans, from the great botanical gardens to the seed beds of physical scientists like the Ecole Polytechnique, have also incubated further ideas about the relation of science and society that are ecumenical in scope. Indeed the positivist overtones of the Polytechnique herald the transition from plutocracy to technocracy, for the technical intelligentsia trained its German, Russian and American counterparts have effected a quasi-religious synthesis of physics and politics. In this 'planning' was the central theme. The social history of such planning (with the concomitant views on the social organisation of science) is the subject of the book. Pressurising it is the conviction that " we can identify a particular thing only by pointing to the various things it successively was before it became that particular thing that it will presently cease to be", and the story, which begins four hundred years ago and ends in 1964.

This volume helps take some of the "mystery" out of identifying and dealing with key algorithms. Drawing heavily on the author's own real-world experiences, the book stresses design and analysis. Coverage is divided into two parts, the first being a general guide to techniques for the design and analysis of computer algorithms. The second is a reference section, which includes a catalog of the 75 most important algorithmic problems. By browsing this catalog, readers can quickly identify what the problem they have encountered is called, what is known about it, and how they should proceed if they need to solve it. This book is ideal for the working professional who uses algorithms on a daily basis and has need for a handy reference. This work can also readily be used in an upper-division course or as a student reference guide. THE ALGORITHM DESIGN MANUAL comes with a CD-ROM that contains: * a complete hypertext version of the full printed book. * the source code and URLs for all cited implementations. * over 30 hours of audio lectures on the design and analysis of algorithms are provided, all keyed to on-line lecture notes.

The four-volume set LNCS 8513-8516 constitutes the refereed proceedings of the 8th International Conference on Universal Access in Human-Computer Interaction, UAHCI 2014, held as part of the 16th International Conference on Human-Computer Interaction, HCII 2014, held in Heraklion, Crete, Greece in June 2014, jointly with 14 other thematically similar conferences. The total of 1476 papers and 220 posters presented at the HCII 2014 conferences was carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The total of 251 contributions included in the UAHCI proceedings were carefully reviewed and selected for inclusion in this four-volume set. The 51 papers included in this volume are organized in the following topical sections: design for all methods, techniques, and tools; development methods and tools for universal access; user models, adaption and personalization; natural, multimodal and multisensory interaction and brain-computer interfaces.

The Handbook on Socially Interactive Agents provides a comprehensive overview of the research fields of Embodied Conversational Agents; Intelligent Virtual Agents; and Social Robotics. Socially Interactive Agents (SIAs); whether virtually or physically embodied; are autonomous agents that are able to perceive an environment including people or other agents; reason; decide how to interact; and express attitudes such as emotions; engagement; or empathy. They are capable of interacting with people and one another in a socially intelligent manner using multimodal communicative behaviors; with the goal to support humans in various domains. Written by international experts in their respective fields; the book summarizes research in the many important research communities pertinent for SIAs; while discussing current challenges and future directions. The handbook provides easy access to modeling and studying SIAs for researchers and students; and aims at further bridging the gap between the research communities involved. In two volumes; the book clearly structures the vast body of research. The first volume starts by introducing what is involved in SIAs research; in particular research methodologies and ethical implications of developing SIAs. It further examines research on appearance and behavior; focusing on multimodality. Finally; social cognition for SIAs is investigated using different theoretical models and phenomena such as theory of mind or pro-sociality. The second volume starts with perspectives on interaction; examined from different angles such as interaction in social space; group interaction; or long-term interaction. It also includes an extensive

overview summarizing research and systems of human-agent platforms and of some of the major application areas of SIAs such as education;aging support;autism;and games.

Self-Care for the Real World Walter de Gruyter GmbH & Co KG
With increasing urgency, decisions about the digitalized future of healthcare and implementations of new assistive technologies are becoming focal points of societal and scientific debates and addresses large audiences. Decisions require a careful weighing of risks and benefits and contextualizing in-depth ethical analysis with robust empirical data. However, up to now, research on social assistive technologies is mostly dispersed over different academic fields and disciplines. A comprehensive overview on discussions regarding values at stake and ethical assessment of recent developments especially in healthcare is largely missing. This publication initiates an interdisciplinary discourse on ethical, legal and social implications of socially assistive technologies in healthcare. Contributions include perspectives from nursing science, social sciences, philosophy, medical ethics, economics and law to present an – to our knowledge – first and comprehensive overview on different aspects of the use and implementation of socially assistive technologies from an ethical perspective. It combines practically relevant insights and examples from current research and development with ethical analysis to uncover exemplary moral tipping points between promotion of participation or well-being and risks and damages to these values. Healthcare professionals involved in implementation of smart technologies as well as scholars from the field of humanities, nursing and medicine, interested in the discussions on ethics and technology in healthcare, will benefit from this new contribution. The publication is part of the international DigitAs conference "Aging between Participation and Simulation – Ethical Dimensions of Socially Assistive Technologies" held at the Institute of Medical Ethics and History of Medicine (Ruhr University Bochum) from 4 February to 8 February 2019. Within this framework, twelve young scholars were invited to discuss their contributions with renowned experts in the field. The Institute of Medical Ethics and History of Medicine is one of the leading institutes in empirically informed ethical analysis in healthcare and medicine and is a member of the European Association of Centres of Medical Ethics (EACME).

Works in the Museum's collection that embody the Renaissance interest in classical learning, fame, and beautiful objects are illustrated and discussed in this resource and will help educators introduce the richness and diversity of Renaissance art to their students. Primary source texts explore the great cities and powerful personalities of the age. By studying gesture and narrative, students can work as Renaissance artists did when they created paintings and drawings. Learning about perspective, students explore the era's interest in science and mathematics. Through projects based on poetic forms of the time, students write about their responses to art. The activities and lesson plans are designed for a variety of classroom needs and can be adapted to a specific curriculum as well as used for independent study. The resource also includes a bibliography and glossary.
