Power supply current monitoring to detect CMOS IC defects during production testing quietly laid down its roots in the mid-1970s. Both Sandia Labs and RCA in the United States and Philips Labs in the Netherlands practiced this procedure on their CMOS ICs. At that time, this practice stemmed simply from an intuitive sense that CMOS ICs showing abnormal quiescent power supply current (IDDQ) contained defects. Later, this intuition was supported by data and analysis in the 1980s by Levi (RACD, Malaiya and Su (SUNY-Binghamton), Soden and Hawkins (Sandia Labs and the University of New Mexico), Jacomino and co-workers (Laboratoire d'Automatique de Grenoble), and Maly and co-workers (Carnegie Mellon University). Interest in IDDQ testing has advanced beyond the data reported in the 1980s and is now focused on applications and evaluations involving larger volumes of ICs that improve quality beyond what can be achieved by previous conventional means. In the conventional style of testing one attempts to propagate the logic states of the suspended nodes to primary outputs. This is done for all or most nodes of the circuit. For sequential circuits, in particular, the complexity of finding suitable tests is very high. In comparison, the IDDQ test does not observe the logic states, but measures the integrated current that leaks through all gates. In other words, it is like measuring a patient's temperature to determine the state of health. Despite perceived advantages, during the years that followed its initial announcements, skepticism about the practicality of IDDQ testing prevailed. The idea, however, provided a great opportunity to researchers. New results on test generation, fault simulation, design for testability, built-in self-test, and diagnosis for this style of testing have since been reported. After a decade of research, we are definitely closer to practice.

This book analyzes the phenomenally profitable “ Red Tourism ” industry in China, in which visitors make pilgrimages to sites of historical significance to the Communist Party of China and the Chinese Revolution. The book examines Red Tourism in connection with the transforming power relations between the state and the private, communication in the socialist past, and the current round of capitalization, against the backdrop of the world ’ s second largest economy. By re-evaluating the conventional notion of propaganda through the lens of neutral xuanchuan propaganda, the book presents a nuanced look at the social space of Red Tourism, revealing that

propaganda should be conceived as a commodity, an industry, or even a media system similar to the news media. Drawn from combining fieldwork and cultural analysis spanning a decade, this book will be of interest to students and scholars of communication studies, tourism, and Chinese politics.
