Frank ISC Economics Class XII Sultan Chand & Sons Saraswati Health and Physical Education is a much acclaimed and popular series in Health and Physical Education. The series demonstrates a deep understanding of the principles and concepts related to the subject while providing students with all the pedagogical tools necessary for comprehension and application.

The fully revised edition, which includes all the latest developments in the field, in its colourful avatar will not only enhance the teaching-learning process but will also make it more enjoyable.

Revising for Examinations VK Global Publications Knowledge updating is a never-ending process and so should be the revision of an effective textbook.

The book originally written fifty years ago has, during the intervening period, been revised and reprinted several times. The authors have, however, been thinking, for the last few years that the

book needed not only a thorough revision but rather a substantial rewriting. They now take great pleasure in presenting to the readers the twelfth, thoroughly revised and enlarged, Golden Jubilee edition of the book. The subject-matter in the entire book has been re-written in the light of numerous criticisms and suggestions received from the users of the earlier editions in India and abroad. The basis of this revision has been the emergence of new literature on the subject, the constructive feedback from students and teaching fraternity, as well as those changes that have been made in the syllabi and/or the pattern of examination papers of numerous universities.

Problems and Solutions in Accountancy Class XII by Dr. S. K. Singh, Dr. Sanjay Kumar Singh, Shailesh Chauhan
 Springer Publishing Company
 Artists and curators have long reached beyond the

constraints of established institutional structures and traditional exhibition spaces. These tendencies were first clearly articulated (with some notable historical avant-garde precedents) in the language that framed conceptual and systems-based art in the 1960s and 1970s. The focus then, as it is today, was upon locating or creating alternative circuits. Today, notwithstanding our significantly technologically augmented capacity to reach and create new audiences, much contemporary artistic activity still

invariably plays directly to an audience of connected peers. Moreover, given that much of this activity is now documented and disseminated as it happens through its surrounding peer network, the robustness of documentation and critical discussion can become easily distorted. Consequently, an inherent correlation to social acceptance and favorability can limit our capacity to meaningfully evaluate quality, and often excludes contributions outside a core group. Also, given that much art now shares media with

other databases and websites, algorithmically driven perceptions of popularity can further influence ways in which art is evaluated, interpreted and valued. This situation invariably presents challenges to artists and curators seeking to establish new audiences or disseminate ideas. Today, new artistic and curatorial approaches are emerging in tandem with digitally-activated modes of presentation and dissemination distinguished by perpetual reproducibility, multiple intersecting

temporalities and materializations, and the subsidence of physical space. Significantly, many of these approaches are no longer necessarily connected to singular events or spaces and are perhaps better understood as omnidirectional movements between modes of conception, production and dissemination connected through the screen as a communal space. This communal space might offer either access to new works, illuminate the existence of works understood to be elsewhere in time and space, or offer

multiple or alternative materializations, versions, attributions, interpretations and representations of existing works. Artistic research can be represented in multiple ways as it moves between modes of conception, production and dissemination. This volume explores a broad range of questions associated with presenting, experiencing, discussing and evaluating art located anywhere and elsewhere in space and time. We are delighted to welcome you to the many worlds contained within.

Power supply current monitoring to detect CMOS IC defects during production testing quietly laid down its roots in the mid-1970s. Both Sandia Labs and RCA in the United States and Philips Labs in the Netherlands practiced this procedure on their CMOS ICs. At that time, this practice stemmed simply from an intuitive sense that CMOS ICs showing abnormal quiescent power supply current (IDDQ) contained

defects. Later, this intuition was supported by data and analysis in the 1980s by Levi (RACD, Malaiya and Su (SUNY-Binghamton), Soden and Hawkins (Sandia Labs and the University of New Mexico), Jacomino and co-workers (Laboratoire d'Automatique de Grenoble), and Maly and co-workers (Carnegie Mellon University). Interest in IDDQ testing has advanced beyond the data reported in the 1980s and is now focused on applications and evaluations involving larger volumes of ICs that improve quality beyond what can be achieved by previous conventional means. In the conventional style of testing one attempts to propagate the logic states of the suspended nodes to primary outputs. This is done for all or most nodes of the circuit. For sequential circuits, in particular, the complexity of finding suitable tests is very high. In comparison, the IDDQ test does not observe the logic states, but measures the integrated current that leaks through all gates. In other words, it is like measuring a patient's temperature to determine the state of health. Despite perceived advantages, during the years that followed its initial announcements, skepticism about the practicality of IDDQ testing prevailed. The idea, however, provided a great opportunity to researchers. New results on test generation, fault simulation, design for testability, built-

in self-test, and diagnosis for this style of testing have since been reported. After a decade of research, we are definitely closer to practice.
