Not long ago, my mom got into coloring books. She loves the patterns, and the peacefulness of bringing them to life with color. One day when she was low on designs to color, I drew her a few myself. They were not like the others. But she colored them in anyhow, and they became much more beautiful that way. My first designs were soon joined by more. Then it was as if they had called their friends, and suddenly there were a lot more -- curious creatures, succulent vegetables, long-legged waterbirds. Some with extravagant footwear. So for those who (like us) enjoy coloring books, but see the world a bit differently, I thought I'd make some of these designs available as lemonsipper coloring books. The designs are printed (mostly) on one side of each page, for a more satisfying experience if you are coloring with markers. This book -- "The Good Boot" -- is the first in the series. It includes 26 full-sized designs to color, with a few small surprises along the way. Take a look inside to see some of the

designs for yourself. I hope you enjoy! -- David Schulman
The Great Before and After
Stationery Office Books (TSO)
Originally published in 1983,
this book presents both the
technical and political
information necessary to
evaluate the emerging threat to
world security posed by recent
advances in uranium enrichment
technology. Uranium enrichment
has played a relatively quiet
but important role in the
history of efforts by a number
of nations to acquire nuclear
weapons and by a number of
others to prevent the
proliferation of nuclear

weapons. For many years the
uranium enrichment industry was
dominated by a single method,
gaseous diffusion, which was
technically complex, extremely
capital-intensive, and highly
inefficient in its use of
energy. As long as this remained
true, only the richest and most
technically advanced nations
could afford to pursue the
enrichment route to weapon
acquisition. But during the
1970s this situation changed
dramatically. Several new and
far more accessible enrichment
techniques were developed,
stimulated largely by the
anticipation of a rapidly

growing demand for enrichment services by the world-wide nuclear power industry. This proliferation of new techniques, coupled with the subsequent contraction of the commercial market for enriched uranium, has created a situation in which uranium enrichment technology might well become the most important contributor to further nuclear weapon proliferation. Some of the issues addressed in this book are: A technical analysis of the most important enrichment techniques in a form that is relevant to analysis of proliferation risks; A detailed projection of the world demand for uranium enrichment services; A summary and critique of present institutional non-proliferation arrangements in the world enrichment industry, and An identification of the states most likely to pursue the enrichment route to acquisition of nuclear weapons.

George C. Tumulty, a comic Everyman, contemplates in deft, sophisticated yet readable poetry, the origins and fate of himself,

humanity, and the universe, raising the big questions: Why is there something rather than nothing? Are the Universe and the conscious mind that contemplates it the products of chance or the result of some ordered destiny? What is humanity striving for in this great comedy of errors we call evolution and progress? How is it that Tumulty and the universe have somehow banged and bungled their way into now?
