How The Other Half Learns The Princeton Review

Jenna Fischer's Hollywood journey began at the age of 22 when she moved to Los Angeles from her hometown of St. Louis. With a theater degree in hand, she was determined, she was

confident, she was ready to work hard. So, what could go wrong? Uh, basically everything. The path to being a professional actor was so much more vast and competitive than she'd imagined. It would be eight long years before she landed her iconic role on *The Office*, nearly a decade of frustration, struggle, rejection and doubt. If only she'd had a handbook for the aspiring actor. Or, better yet, someone to show her the way—an established actor who could educate her about the business, manage her expectations, and reassure her in those moments of despair. Jenna wants to be that person for you. With amusing candor and wit, Fischer spells out the nuts and bolts of getting established in the profession, based on her own memorable and hilarious experiences. She tells you how to get the right headshot, what to look for in representation, and the importance of joining forces with other like-minded artists and creating your own work—invaluable advice personally acquired from her many years of struggle. She provides helpful hints on how to

be gutsy and take risks, the tricks to good auditioning and callbacks, and how not to fall for certain scams (auditions in a guy's apartment are probably not legit—or at least not for the kind of part you're looking for!). Her inspiring, helpful guidance feels like a trusted friend who's made the journey, and has now returned to walk beside you, pointing out the pitfalls as you blaze your own path towards the life of a professional actor.

With a focus on what mathematics and science educators need to know about academic language used in the STEM disciplines, this book critically synthesizes the current knowledge base on language challenges inherent to learning mathematics and science, with particular attention to the unique issues for English learners. These key questions are addressed: When and how do students develop

mastery of the language registers unique to mathematics and to the sciences? How do teachers use assessment as evidence of student learning for both accountability and instructional purposes? Orienting each chapter with a research review and drawing out important Focus Points, chapter authors examine the obstacles to and latest ideas for improving STEM literacy, and discuss implications for future research and practice.

Flash Kids Studies of teachers in the U.S. often document insufficient subject matter knowledge in mathematics. Yet, these studies give few examples of the knowledge teachers need to support teaching, particularly the kind of teaching demanded by recent reforms in mathematics education. Knowing and Teaching Elementary Mathematics describes the nature and development of the knowledge that elementary teachers need to become accomplished mathematics teachers, and suggests why such knowledge seems more common in China than in the United States, despite the fact that Chinese teachers have less formal education than their U.S.

counterparts. The anniversary edition of this bestselling volume includes the original studies that compare U.S and Chinese elementary school teachers' mathematical understanding and offers a powerful framework for grasping the mathematical content necessary to understand and develop the thinking of school children. Highlighting notable changes in the field and the author's work, this new edition includes an updated preface, introduction, and key journal articles that frame and contextualize this seminal work.

An inside look at America's
most controversial charter
schools, and the moral and
political questions around
public education and school
choice. The promise of
public education is
excellence for all. But that
promise has seldom been
kept for low-income
children of color in

America. In How the Other
Half Learns, teacher and
education journalist Robert
Pondiscio focuses on
Success Academy, the
network of controversial
charter schools in New
York City founded by Eva
Moskowitz, who has created
something unprecedented in
American education: a way
for large numbers of
engaged and ambitious low-
income families of color to
get an education for their
children that equals and
even exceeds what wealthy
families take for granted.
Her results are astonishing,
her methods unorthodox.
Decades of well-intended
efforts to improve our
schools and close the
"achievement gap" have set
equity and excellence at
war with each other: If you
are wealthy, with the means
to pay private school tuition
or move to an affluent
community, you can get
your child into an excellent
school. But if you are poor
and black or brown, you
have to settle for "equity"
and a lecture--about
fairness. About the need to
be patient. And about how
school choice for you only
damages public schools for
everyone else. Thousands
of parents have chosen
Success Academy, and
thousands more sit on
waiting lists to get in. But
Moskowitz herself admits
Success Academy "is not
for everyone," and this
raises uncomfortable
questions we'd rather not

ask, let alone answer: What if the price of giving a first-rate education to children least likely to receive it means acknowledging that you can't do it for everyone? What if some problems are just too hard for schools alone to solve?
